Oxygen Forensic Suite 2012 Adds Support for Amazon Kindle Fire HD

Oxygen Software updates Oxygen Forensic Suite 2012, the company's flagship mobile forensic tool, adding support for device-specific applications pre-installed in newly released Amazon Kindle Fire HD tablets. With Amazon Kindle Fire HD setting record numbers in pre-sales, the latest Amazon e-reader/tablet will inevitably occupy a noticeable niche. By supporting pre-installed apps in the latest Amazon device, Oxygen covers a large segment on the market of proprietary e-readers.

Amazon Kindle Fire HD Support

The new release of Oxygen Forensic Suite 2012 enables forensic support for the new Kindle Fire HD, a fully-featured Android-powered tablet and an e-book reader sold by Amazon. The Oxygen team investigated the specifics of the new device, analyzed the new and unique apps, and determined types and locations of user data that can be stored by these apps. During the last month, Oxygen Software conducted a series of training sessions in the USA, the UK and Germany and received enthusiastic feedback from participating forensic experts. During the training sessions, Oxygen team demonstrated successful acquisition and parsing of data acquired from the new Kindle with Oxygen Forensic Suite 2012.

Being a fully featured Android device with wireless capabilities, the new Kindle is not just an e-reader. The new device can be used for everything Android tablets are used for, including online and mobile (in 4G-enabled versions) communications. It perfectly fits as a communication device, and is bound to keep a massive amount of user data. Kindle Fire HD users carry it around to surf the Web, make Skype calls, and communicate in Facebook, Twitter, and instant messengers. The information about these and other activities can be successfully extracted from Kindle Fire HD, as demonstrated by Oxygen Software. By supporting the latest Kindle, Oxygen Forensic Suite 2012 offers investigators the ability to analyze the specific data produced by apps pre-installed into the new e-reader.

About Amazon Kindle Fire HD

Every new Kindle brings Amazon thousands new customers and upgraders, but this time the device appears to be in a much higher demand than ever before. According to Cult of Android (c), more than 250,000 units have been preordered during the first week since Amazon put the new device on its Web site. If this level of demand continues, the company may have well over a million units pre-ordered even before the device goes officially on sale on November 15th.

About Oxygen Forensic Suite 2012

Oxygen Forensic Suite 2012 helps investigators and forensic specialists access and analyze data from a variety of mobile devices such as cell phones, smartphones, communicators, PDA and tablet PCs. Currently supporting more than 6,000 different models, Oxygen Forensic Suite 2012 covers the widest range of mobile devices compared to competition, and allows fully automated acquisition and analysis of supported devices.

The unique Timeline feature offers convenient, single-place access to all activities and movements performed by the user arranged by date and time. Investigators can track user location at every moment, build and map their historic routes, and clearly see all activities performed by the user at each location.

Another signature feature of Oxygen Forensic Suite allows investigators performing a global search on all devices ever analyzed with the toolkit. The global search quickly reveals any connections (e.g. common contacts, exchanged calls, texts or emails) between the phone owners.

Oxygen's statistical analysis tools allow investigators discover social connections between the users of multiple mobile devices. Calls, text messages and Skype conversations are analyzed to produce charts and tables revealing the users' closest circle at a glance.

Oxygen Forensic Suite 2012 guarantees zero-footprint operation, leaving no traces and making no modifications to the content of the devices, making it the tool of choice among government and law enforcement agencies, security services and forensic organizations in more than fifty countries.

About Oxygen Software

Founded in 2000, Oxygen Software offers the most advanced forensic data examination tools for smartphones and mobile devices. The company is dedicated in delivering the most universal forensic solution covering the widest range of mobile devices running Symbian, Windows Mobile, Blackberry, iOS, and Android operating systems. As a result, Oxygen Forensic Suite receives great response at forensic conferences, exhibitions and trainings, and occupies a spot in the top of the list in relevant tests for extracting more data than competition.
