Bio-Pharm Pharmaceutical Implements Valdata's Chemical Management System

Bio-Pharm's Chemical Management System Installation Goes Live in their Levittown, PA Plant

October 23, 2012: Valdata Systems today announced the implementation of their Chemical Management System (CMS) in the Bio-Pharm Pharmaceutical plant in Levittown, Pennsylvania.

Bio-Pharm is a rapidly expanding manufacturer of generic pharmaceuticals who was looking for a software solution that could handle the regulatory complexities of pharmaceutical manufacturing while providing complete quality control and improved efficiency. A consultant recommended the implementation of a chemical management system, and Valdata was able to meet their needs with its popular Chemical Management System.

The initial phase of installation includes Inventory Management, Manufacturing Execution and LIMS (Laboratory Information Management), with the final phase of Recipe Management expected to be completed within the next 6-8 weeks.

"Bio-Pharm is growing at a fast rate, adding almost 30,000 square feet and a new state-of-the-art pharmacy. We are thrilled to partner with this company to assist them in their goal of maintaining total control over all areas of inventory, formulation, manufacturing and quality" Tom Winter, President, Valdata Systems

Like many pharmaceutical companies, prior to the implementation of CMS Bio-Pharm relied on a paper system. Paper systems have been proven to be inefficient, time consuming and unable to prevent or detect errors. Bio-Pharm is now taking advantage of the added time efficiency and quality control provided by a paperless system which prompts and polices workers through every step of the manufacturing process.
