Sage 300 ERP Goes to the Cloud and Benefits from Subscription Pricing

Myownasp.com re-launches Sage 300 ERP hosting program with new subscription pricing options, putting popular accounting system with multi-language, multi-location, and multi-currency capabilities in the cloud.

ATLANTA, GEORGIA – October 25, 2012 — Myownasp.com (http://www.myownasp.com), a division of Software Link and a Sage authorized Partner, has re-launched it's popular hosting service for Sage 300 ERP (formerly "Sage Accpac"). The company updated its hosting program based on new subscription pricing options unveiled by Sage earlier this year. Together with subscription pricing, Myownasp.com is able to provide full-function Sage 300 ERP with access to the full-range of modules, including support for third-party applications, as a true cloud-based, Software-a-a-Service (SaaS) solution.

Stanley Kania, President and CEO at myownasp.com, says the re-launch comes at a time when SaaS-based ERP solutions in the cloud have gained significant momentum. "We're finding customers that already own Sage 300 ERP, or are looking to implement new software, want to host their system in the cloud due to the significant reduction in costs. There's no additional hardware or software to buy, no complicated network infrastructure to support, and your in-house IT requirements are reduced to practically nothing. This makes Sage 300 ERP hosting a cost-effective solution for companies looking to break into foreign markets or expand internationally."

Sage 300 is a global reaching ERP solution that was developed with functionality to support multiple countries, languages, and currencies which provides a nice fit for the Myownasp.com hosting program. Kania says, "Companies that sell to and service customers globally often run the business from multiple locations. That makes Sage 300 hosting an attractive option, providing easy access to the ERP system from anywhere and anytime with built-in support for multiple languages and multi-currency transactions."

With the Sage 300 hosting program by Myownasp.com, both existing and prospective customers get the convenience of a monthly pay-as-you-go, Saas-based accounting software solution with automatic backups and software updates, built-in mobile access, and all the common benefits of running ERP software in the cloud. Myownasp.com also supports the wide range of third party integrated products available for Sage 300.

Kania points out that customers also have the option of taking Sage 300 ERP off the cloud server and can transition to an on-premise, local installation – as well as purchase the software outright - at any time. He adds, "The SaaS model provides affordable access to technologies that are transforming the way businesses of all sizes operate. Lower cost of ownership, up and running quickly, and access to the full range of functionality – that's the Myownasp.com value proposition."

Myownasp.com cloud-based hosting is available for all versions of Sage 300 ERP and pricing starts at just **$145 per user per month** which includes the cost of software subscription and hosting.
