TourWrist®

Turn-key App

This best–in–class design includes patent–pending motion control algorithms and a bevy of powerful sharing tools.

Turn–Key App

RIGHT FOR YOUR CUSTOMERS

With our best–in–class viewer, a customizable marketing panel, search tools, and social media integration, a TourWrist custom app is the most powerful, turn–key pano-publishing solution on the market, supporting iPhone, iPad and iPod Touch users. Extending to desktop visitors, TourWrist embed code is auto–generated for use in any site, and can even be coded for hundreds of tours at once. Much like embedding YouTube videos, this technology "just works" and is smart enough to tailor its delivery to best match a user's software configuration; if no Flash is detected, HTML 5 is used. Plus, we give you access to nearly a million installed "TourWrists." With integrated forwarding capabilities, our platform traffic can be directed to your app, giving you significant, added exposure.

RIGHT FOR YOU

TourWrist eliminates the risk, time and expense that accompany reliable pano delivery. Our device–agnostic content delivery network (CDN) is built upon Amazon's highly-regarded EC2 and S3 web services to ensure that your content is ready and waiting for every customer. Plus, with our ability to repurpose your existing panoramic images, there's no need to reshoot properties you have already catalogued. We can even add interactive PanoSpots to them, directing visitors of your virally–shared property panos back to your booking engine (optionally, as part of an affiliate agreement). Pricing is equally accommodating, allowing you to pay monthly per app under a subscription model, or to secure a perpetual buyout. Subscriptions require a one–year minimum commitment. In the event that you switch from subscription to a perpetual license, 25% of an app's previously paid subscription fees will be applied to the perpetual license.
