Curos[®] Port Protector

Proven to reduce catheter related bloodstream infection (CRBSI) time and time again

- ▶ 12 bed Bone Marrow Transplant unit and 20 bed Oncology unit reduced their rate of CRBSI from **2.9** to **0.4** per 1000 catheter days.*
- ▶ Hospital reports **ZERO** rates of CRBSI for the first two quarters of 2010 after implementing Curos.*

- ▶ In a Children's hospital, CRBSI rates in the first 12 months of using Curos[®] was **0.30** per 1000 catheter days compared with **0.93** per 1000 catheter days in the preceding 12 months.*

Curos[®] Port Protector is a **simple, innovative disposable** medical device that guards against infection by keeping luer-activated needle-free access devices protected and clean.

Dramatically more effective than a standard alcohol swab in reducing bacteria counts¹, Curos[®] is clinician preferred for safeguarding patients from bloodstream infections.

Simply peel, twist and protect for up to seven days

Curos® Port Protector

Innovative, simple and disposable port protection

Features and Benefits

Visible

and vibrant colour assures high visibility compliance with hospital infection control protocols.

Protection

for all IV access ports and needle-free devices between accesses.

Always clean

alcohol impregnated Curos® consistently disinfects luer-activated access ports for up to seven days.

Available in two presentations

Curos® Single Port Protector (SPP)

Curos® single presentation Port Protector offers all the same benefits in terms of the reduction in CRBSI for patients in the non-acute setting.

Curos® Drip-Strip

The new Curos® Strip provides clinicians with a perfectly accessible dispenser for Curos® port protectors at the point of care. The ten-cap, foil-backed dispenser can be hung on an IV pole or other convenient bedside location so that nurses have easy access to consistent and reliable passive disinfection during every IV access.
