Inspect2GO

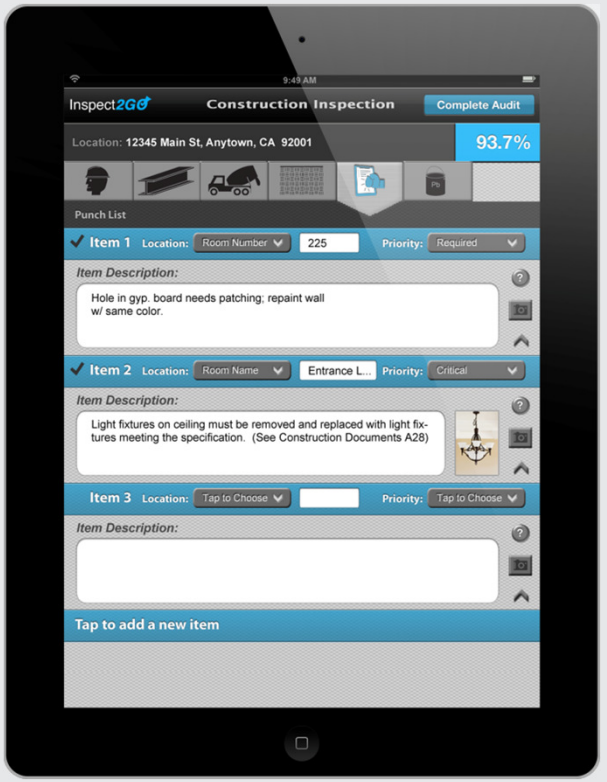
Why Tablets?

Tablets are quickly replacing clipboards and laptops in many industries. Here's why we think tablets are the best hardware choice:

- **$ Savings** – Lower tech support costs than laptops, and more efficient than clipboards
- **Quality** – Better legibility than clipboards, and more accurate than laptops since info is typed when observed
- **Reliability** – Tablets work. They are more rugged than laptops and have fewer virus/tech issues
- **Time** – Instant boot up, no double entry, no hand note transcribing, use on the spot
- **Use anytime** – Native apps work where there is no web connection*
- **Use anywhere** – Type, photograph, complete reports, etc., all while carrying a lightweight tablet
- **Tech** – Avoid boundaries of outdated laptop technology
- **Fun!** – Better employee satisfaction, enthusiasm, and retention



* Some advanced features utilizing server data will require a connection to the internet.

Inspect2GO

File Browser

The file browser is where anyone with a username interacts with the files. This is what an Administrator might see:

- Info at a glance
  - Project number
  - Project name
  - File size
  - Report status
- File interactions
  - View, print, change status, and more
  - Available interactions are dependent on you permission level
- File Log
  - Keep track of who is doing what to the file
- User access
  - Know who has access to the file
