

Are you frustrated by growing data requirements and interested in how **non-relational databases** could help? Curious about where and how NoSQL systems are being deployed? Want to build a "real" **Highly Scalable System**? Answered yes to any of these questions? Then the **NoSQL Roadshow** is of interest to you.

These informative and intensive 1 day sessions are designed to give you an overview of the changing landscape around data management. The roadshows are focusing on **"Big Data" and NoSQL databases**, which are based on non traditional, non relational data models. The NoSQL Roadshow London is for everyone who is interested in more flexible, more available, and cheaper solutions for managing rapidly growing databases and data stores.

After introducing the business problems, you will learn how to attack these growing issues and hear first-hand how organisations were able to solve their modern data problems with innovative solutions like **Riak, MongoDB, Cassandra, Hadoop, and many others**. In other words, the whole program will realize you how simple and quickly you may solve a new class of data management problems, connected with storing and processing data inside distributed, contemporary IT environments, such as a cloud.

NoSQL Roadshow London is also a wonderful opportunity for **CEOs, CTOs, developers and NoSQL ambassadors** to meet and discuss with potential clients and investors.

Register Now for London!
