

Effective and Measurable Compliance Training for Everyone

We've heard it time and again, you have training that you must give employees every year. You know your employees aren't paying attention or are clicking through slides as fast as possible. You know the content is boring, but you still need to show that everyone has been trained. You know that the training should be more effective and more relevant to your employees. You don't want just any-old training, your job is to ensure you've minimized risk with employee behavior change.

Wombat Security Technologies has a proven training methodology that Assesses, and Trains end users and Measures their behavior change. Until recently, the training methodology has been focused on cyber security topics, but is now being applied to compliance topics. Governance, Risk management, and Compliance (GRC) officers can rest assured that their employees are truly learning how to be compliant, not just guessing at quiz questions to get a certificate.

Effective Compliance Training that's Easy to Deploy

- Cloud-based Security Training Platform gives you all the tools you need to deploy a continuous cycle of evaluation and training
- Software based training modules are interactive, engaging and less than 10 minutes long
- Employees practice concepts as they learn and get immediate feedback, which lengthens retention
- Data collected during employee training sessions can be aggregated to understand areas of compliance strength or weakness
- Unlimited use subscription means you can assign assessment and training as needed throughout the year, not just annually

At Wombat we are singularly focused on employee training that creates common knowledge and behavior across the organization regardless of employee expertise.

Yes, Everyone Needs to Learn

Our training is developed so that it is relevant regardless of technical knowledge. Wombat's compliance training modules available today include:

Payment Card Industry Training Data Security Standard (PCI DSS) Training

Teach employees how to recognize dangers and improve the overall security of credit card data. We offer a PCI Manager module and a PCI Employee module to train people in different roles.

Users will learn about:

- Understanding PCI-DSS requirements
- Identifying PCI-DSS compliance
- Managing records and accounts
- Recognizing and acting upon security breaches

Personally Identifiable Information (PII) Training

This module teaches employees the best practices for handling, storing, and sharing PII.

Users will learn about:

- The different types of PII
- Guidelines for identifying, collecting, and handling PII
- Which actions to take in the event of a PII breach
- Tips and techniques for improving overall security associated with PII

Data Protection and Destruction

Teach employees how to protect themselves when using portable storage devices and how to properly discard sensitive data.

Users will learn about:

- The different types of portable electronic devices and removable storage media
- The pros and cons associated with these devices and media
- Best practices for securing your data
- How to securely dispose of your data

Wombat's Proven Training Methodology

Assess

Our family of assessment tools, enables you to take a baseline measurement of the organizations' knowledge at the start of your compliance training program. This baseline provides valuable insight to the level of training required as well as a benchmark to measure the effectiveness of the ongoing training program as you continue to reassess and train your employees.

Train

With the intelligence provided from the assessment you can assign training to the people who need it most, first. Wombat Security's training modules utilize learning science principles to make the training engaging and interactive, ensuring retention and employee behavior change.

Measure

You can easily verify who has completed training and in what areas employees are knowledgeable. Our platform also makes it easy for you to create assignments for people who have achieved a low score and may present a risk to the organization.

A sample of our reports include:

- Assignment Status
- Most Missed Items
- Module Performance
- User Report Cards
