

For Immediate Release

**Global Conferencing Solutions Expands Managed Service Capacity with New Video Conferencing Capabilities for Immersive Telepresence Systems.**

Global Conferencing Solutions, a managed service provider for video conferencing and telepresence, now offers breakthrough technology for Immersive Telepresence Interoperability. GCS utilizes the Radvision Elite MCU's new Telepresence Interoperability feature of Scopia V7.5 to provide connectivity to users with immersive telepresence systems from Cisco, Logitech/Lifesize, Polycom, and Tandberg. This allows users to view all meeting participants in a multi-party call, including those on traditional video conferencing systems and immersive telepresence systems from other vendors. Users participating with traditional video conferencing systems will see immersive telepresence participants in a special video layout where multiple video streams are combined into a single panoramic image. Immersive telepresence users no longer have to be stranded in their closed solutions with GCS managed services and this breakthrough interoperability technology for immersive telepresence.

**About Global Conferencing Solutions:**

Global Conferencing Solutions, with its Conference and Collaboration Center headquartered in Minneapolis, MN, is a managed service provider for video conferencing and telepresence that provides video connectivity and collaboration capabilities that virtually extend to anyone, anywhere, using any system. Our services support a wide array of platforms from 3G/4G mobile devices, PC and Mac desktops, standards-based video endpoints and immersive multi-vendor telepresence systems.
