According to data from a recent study by the National Highway Traffic Safety Administration, shifting into reverse may be *more* dangerous than previously thought. According to the first study conducted on the issue, 463 people were killed by vehicles backing up in 2007. That is more than 8 deaths per week. In the same period, about 48,000 people were injured in backup accidents.

Rosco Vision Systems video technology now makes it affordable for drivers to have an added dimension of safety. A Rosco backup camera makes backing up easier and your fleet or personal vehicle less prone to accidents!

MONITOR P/N: STSM230

“shifting into reverse *more* dangerous than previously thought.”

Rosco Vision Systems introduces a revolutionary new backup camera system for small to medium vehicles. This new system utilizes an interior rearview mirror to display a 4.3" LCD monitor when the vehicle is in reverse operation. This monitor allows the driver to see behind the vehicle, and once the vehicle is shifted to all other modes of vehicle operation a normal mirror view reappears.

The camera has an advanced CMOS lens sensor able to process excellent images in all light conditions, even in complete darkness. The camera has a 170° diagonal field of vision for superb coverage behind the vehicle, and complies with latest NHTSA 49 CFR Parts 571 & 585 (RIN 2127-AK43).

P/N: STSC130B

P/N: STSC130W

*Please consult with a Rosco Sales Representative for other camera options including trunk & bumper mounted cameras

**Camera Finish Available in Black or White
