

FIELD-LEVEL DATA MANAGEMENT (FDM)

Transform paper-based forms and surveys into intelligent field-level data collection applications.

Extend WorldAPP's core technology outside your office and into the hands of your mobile workforce. WorldAPP Unplugged lets you replace your paper-based processes with electronic forms and surveys that work on nearly every device, online, and even offline. The robust feature set will let you maximize productivity through task automation and workflow, eliminating the need to double-enter response data and providing real-time analytics and insight via comprehensive BI reports.

Mobile Data Collection

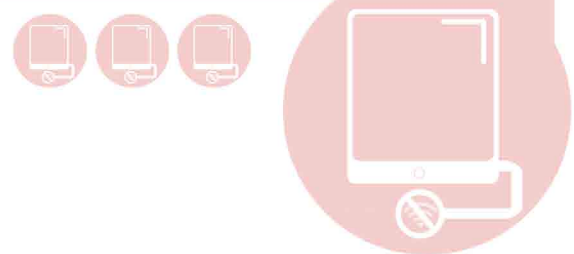

Outfit your mobile workforce powerful data collection technology

- Installs as an app on your device
- Collect data intelligently using web forms and surveys
- Execute forms and capture electronic signatures using just the tip of your finger
- View response data in real-time via analytics reports or BI Dashboards
- Customize to fit your exact operational needs with plugins, CSS and JavaScript

Offline Mode

Expand your business beyond the limits of WiFi

- Collect and manage data without an Internet connection
- Respond multiple times to the same form or survey
- All data is stored locally on your device until a connection is reached or restored
- Use logic and data validation within your web forms

Mobile Application:

Featured Highlights

- Mobile optimized interface
- Flexible, Java based core technology
- Deploy or submit forms and surveys on the go
- Track form submission or progress of the respondent
- Ability to access and submit a form multiple times
- Ability to access native device functionality
- Example: Capture and attach photos from right inside a form
- Capture electronic signatures with just the tip of a finger

Offline web application is compatible for HTML5 browsers (Chrome, Safari, Firefox, Blackberry, iOS and Android browsers):

Featured Highlights

- Ability to sync a web form to the application for use in offline mode
- Ability to save, edit and delete responses offline
- Support for multiple pages, logic, data validation, visual plugins and custom JavaScript

iPad, iPhone, Android tablets and phones:

Featured Highlights

- Installs as an app
- Storage is limited by the memory available on a device
