

MR. ROOTER® TRENCHLESS PIPELINING SYSTEM BENEFITS

- Eliminates Root Intrusion
- Stops Infiltration and Ex-filtration
- Renews Pipe Life to Minimum of 50 Years per ASTM F 1216 Third Party Testing
- 22, 45, and Sweeping 90 Degree Bends
- Stand Alone Design / No Host Pipe Needed
- Bridges Missing Sections of Pipe
- Relines Virtually Any Pipe Material
- 2" to 8" Diameter Available
- IAPMO Approved
- NSO Standard 14 Certification

BEFORE

The Trenchless pipelining system is the alternative to digging and replacing sewer lines for residential and commercial properties. No other system can match the ease of installation and quality materials available from *Mr. Rooter* Plumbing.

AFTER

Trenchless pipelining is the future of pipeline repair and *Mr. Rooter* Plumbing has taken this technology to a new level, saving you time and money.

PLUMBING

TRENCHLESS PIPELINING SYSTEM

THE TRENCHLESS ALTERNATIVE:

- Repairs cracked or broken pipes without extensive excavation
- Eliminates roots and infiltration
- Bridges missing pipe sections

MR. ROOTER® TRENCHLESS PIPELINING SYSTEM APPROACH

This amazing technology requires one small access point where a hole is dug and the sewer pipe is inspected with our video camera. We clean the line with our Hydroscrubbing jet and liner material is measured and an epoxy resin is mixed and applied. The liner is then launched into the old pipe from the single access point. The liner eliminates root intrusion, repairs broken pipes and stops the inflow of sub-surface ground water.

HOW THE MR. ROOTER TRENCHLESS PIPELINING SYSTEM WORKS

The pipe-liner is cured in place for 4-6 hours and then another video inspection confirms a successful job. The result is one continuous pipelining without joints, leaks, or roots. This liner enhances the structural strength of the host pipe and acts as a stand alone pipe within a pipe, meeting or exceeding structural standards.

COMPARISON

TRENCHLESS PIPELINING

- Will not destroy lawn or landscaping
- Takes less than one day to complete
- No additional expense for restoration

CONVENTIONAL DIG

- Damages lawn and landscaping
- Takes 2 to 5 days to complete
- Expense for restoration materials

A *Mr. Rooter* technician will explain the options and whether trenchless pipelining is the right solution to best fix your problem.
