share.

Over coffee.

**NPrinting** VIZUBI  
Qlikview reporting done right

## IMPROVE PERFORMANCE

NPrinting is the most advanced report generation, distribution and scheduling application for QlikView on the market. It lets you create and modify reports quickly, generate and filter them based on updated data and distribute them to whom and when you need. Get the right information to the right people at the right time.

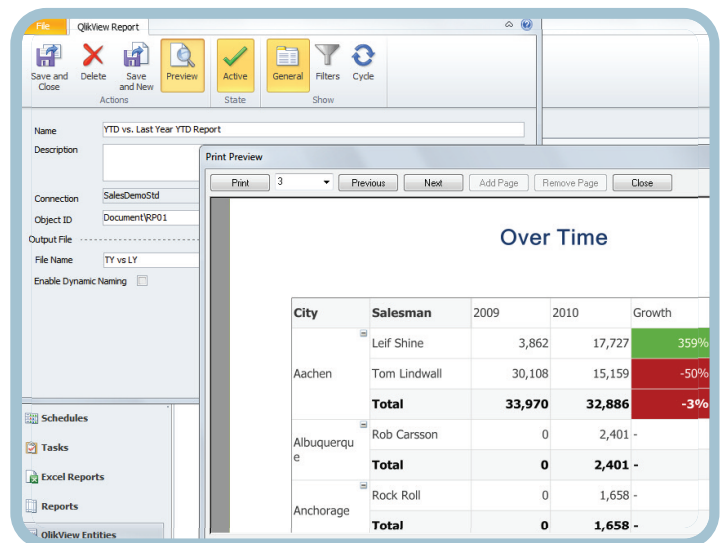

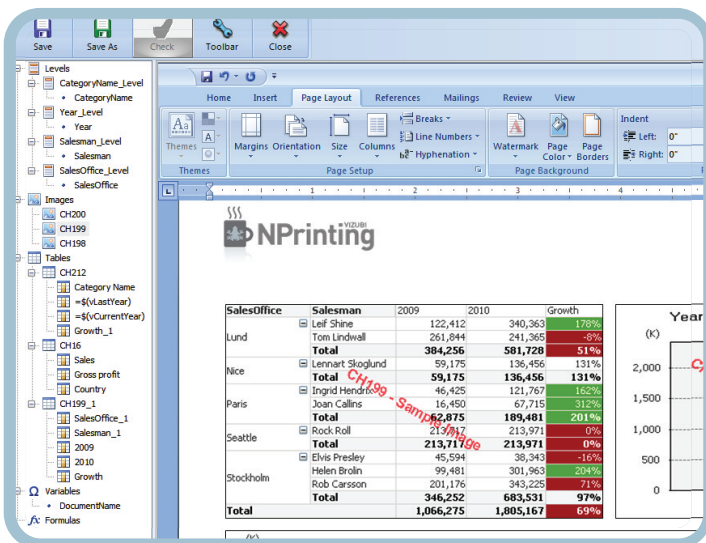

## FROM ANALYSIS TO ACTION IN A SINGLE CLICK

Rapidly develop and implement scalable reporting solutions. Design reports from QlikView tables, charts and objects using Excel, Word, PowerPoint and HTML with drag-and-drop simplicity. Schedule reports or let your users generate them on demand from the QlikView desktop application or from a browser. Our intuitive interface will get you up and running in hours. You can develop an Enterprise report scheduling and distribution program in a few days.

## TIMELY INFORMATION TO THE RIGHT PEOPLE

NPrinting allows you to send user-appropriate information on an ad-hoc or scheduled basis. You always distribute the appropriate information through the appropriate channel at the appropriate time because users are associated with specific filters, e-mail addresses, directories, Section Access User IDs and passwords. Reports can be delivered by e-mail, saved to user directories or published on your websites. It is also possible to generate reports only if specific data conditions are met. For maximum security, encrypt reports using public key infrastructure.

Create professional reports by simply dragging and dropping your QlikView data and images into Excel, Word, PowerPoint, and HTML reports. Leverage the value of your existing assets by distributing your QlikView reports.

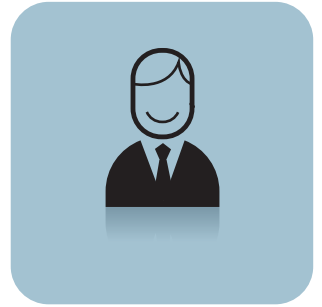

## LEVERAGE THE VALUE OF EXISTING ASSETS

Create Word, Excel, and PowerPoint report templates to make use of existing skills in your organization and create professional output to distribute as is, in PDF or as an image. Distribute existing QlikView reports in PDF and in image formats to take advantage of the work you've already done in QlikView. Import and update user lists by LDAP or from Excel and text files or databases. Import user filters and Section Access information together with users and put them automatically into distribution groups, simplifying user list management and maintenance. Existing QlikView bookmarks can be used as filters in NPrinting.

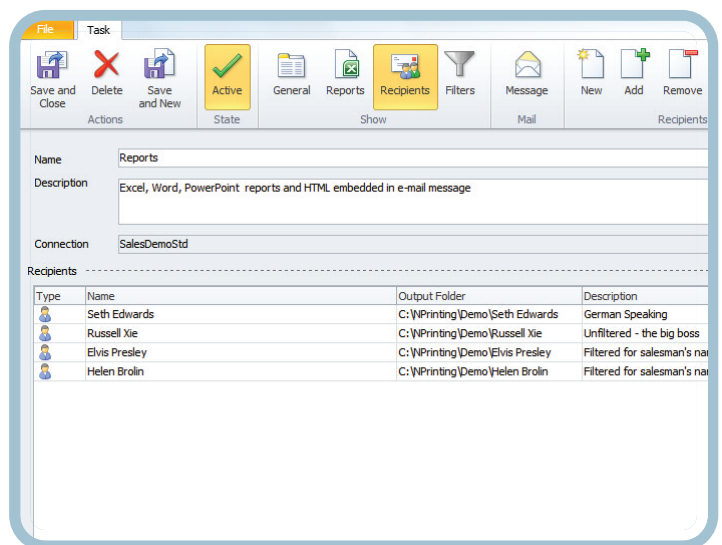

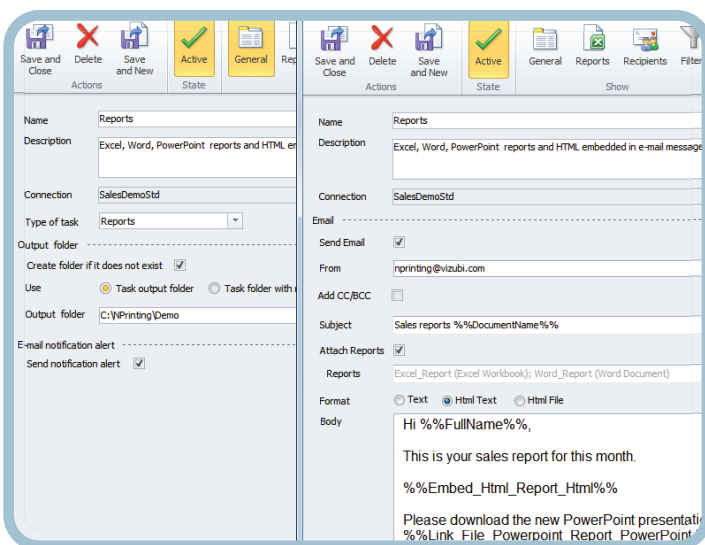

## YOUR SUCCESS IS OUR MISSION

Creating the most intuitive and best supported information management solutions for you is our mission. We know that our users face the continuous challenge of meeting ever more demanding needs in the face of a massive increase in available information and so we continue to add features and build stability into all of our products. We are constantly working hard together with our worldwide network of more than 50 prestigious partners to help you become the killer app.

## TEST THE ENTERPRISE EDITION FREE!

Download the Enterprise trial now! Test this reliable, full-featured application with your own data at no charge. Or contact one of our partners for more information.

Deliver your reports to your recipients via e-mail, by saving them into recipient-specific directories or by publishing them on your websites. Use cycles and filters to send everyone precisely the information they should see
