Oxygen Forensic Suite 2013 Adds Network Licensing for Greater Savings

Oxygen Software introduces a new license type to Oxygen Forensic Suite 2013 v.5.0, allowing organizations to save on licenses by sharing access to Oxygen Forensic Suite over the network. With the new Network License, Oxygen charges only for the number of licenses that are about to be used simultaneously – and not for the number of PCs the forensic suite gets installed to. The new license type will present greater savings to small, medium-sized and large organizations.

The new license type requires only a single USB dongle that can be shared among the multiple computers over the local network. As opposed to previously available license types that charge license fees per installation, the Network license presents companies an opportunity of greater savings by only charging for the number of instances that are used simultaneously – regardless of the number of PCs that get Oxygen Forensic Suite installed. Besides the Network license includes all add-ons: Android Rooting and Chinese Phones Support.

Oxygen Forensic Suite 2013 Network License

New to Oxygen Forensic Suite 2013 v.5.0, the innovative Network license is being introduced by popular demand from Oxygen's large and medium-sized customers, allowing them to share a single USB key over the local network. Organizations of all sizes will quickly realize the savings. Large companies will benefit the most, but small and medium-sized organizations will also have an opportunity to pay significantly less. Additional benefits include the use of a single USB dongle shared over the local network, as well as the increased convenience of having Oxygen Forensic Suite 2013 with Android Rooting and Chinese Phones Support add-ons installed on as many workstations as needed without having to pay for the extra installations.

The main difference between the old types of licenses and the new Network license is the option to pay for the number of instances of Oxygen Forensic Suite that are used at the same time – and not for the number of installations that can be used or not.

About Oxygen Forensic Suite 2013

Oxygen Forensic Suite 2013 helps investigators and forensic specialists access and analyze data from a variety of mobile devices such as cell phones, smartphones, communicators, PDA and tablet PCs. Currently supporting more than 6,300 different models, Oxygen Forensic Suite 2013 covers the widest range of mobile devices compared to competition, and allows fully automated acquisition and analysis of supported devices.

The unique Timeline feature offers convenient, single-place access to all activities and movements performed by the user arranged by date and time. Investigators can track user location at every moment, build and map their historic routes, and clearly see all activities performed by the user at each location. Timeline is now available for analyzing DMG images.

Another signature feature of Oxygen Forensic Suite allows investigators performing a global search on all devices ever analyzed with the toolkit. The global search quickly reveals any connections (e.g. common contacts, exchanged calls, texts or emails) between the phone owners.

Oxygen's statistical analysis tools allow investigators discover social connections between the users of multiple mobile devices. Calls, text messages and Skype conversations are analyzed to produce charts and tables revealing the users' closest circle at a glance.

Oxygen Forensic Suite 2013 guarantees zero-footprint operation, leaving no traces and making no modifications to the content of the devices, making it the tool of choice among government and law enforcement agencies, security services and forensic organizations in more than fifty countries.

About Oxygen Software

Founded in 2000, Oxygen Software offers the most advanced forensic data examination tools for smartphones and mobile devices. The company is dedicated in delivering the most universal forensic solution covering the widest range of mobile devices running Symbian, Windows Mobile, Blackberry, iOS, and Android operating systems. As a result, Oxygen Forensic Suite receives great response at forensic conferences, exhibitions and trainings, and occupies a spot in the top of the list in relevant tests for extracting more data than competitors.
