

ORDERSHARK™

- Bring Your Own Device (BYOD)
Telxon Replacement for Retail
- Lightning-Fast Precise Scanning
Using Smartphone Camera
- Scans All Existing Telxon
Symbologies
- Full Order Log Capabilities
- iPhone, Android or iPod Touch
- No Hardware To Buy
- Uses Your Current Telxon
Interface

Swim To www.Ai2.com For Your Demo

OrderShark™ solves your Telxon problems permanently – without purchasing new hardware. OrderShark is an app for Android, iPhone and iPod that provides superior functionality to Telxon order entry without acoustic connectivity problems. OrderShark emulates the look and functionality of the familiar Telxon but with the enhanced order log capabilities commonly found in expensive pocket PC systems.

OrderShark is the low-cost alternative that improves communication between a retailer and distributor, with superior functionality over existing Telxon devices. OrderShark supports a BYOD (“Bring Your Own Device”) approach that saves a distributor from making a large hardware investment.

Using the smartphone’s camera, OrderShark scans any barcode type from any angle using lightning-fast proprietary scanning technology. It reads all existing UPC types as fast as a Telxon and it also reads QR codes. It handles all existing Telxon symbologies.

Users can view, edit, retain and copy previous orders. The system provides the status of all orders including confirmation that an order was received by the host. Orders are sent over WiFi or cellular networks. A user familiar with a Telxon will require no training for OrderShark. It also supports international language sets for easy multilingual use.

OrderShark interfaces quickly and easily to your existing Telxon interface, which shortens deployment time. A distributor or retailer need not purchase any new computer hardware or fret about complicated deployment logistics. Users simply download OrderShark from the Apple or Android app store to their existing smartphones or iPods, enter a specifically assigned confirmation number and begin building their orders immediately.

To get OrderShark™ working for you, visit booth 217 at the AWMA Show or go to www.ai2.com
