How It Works

The Dialer Cloud allows customers to purchase their own dialer and connect it to the cloud. This allows the customer to connect to carriers of their choice, thus saving money on termination charges.

With today's increasing internet speeds, it is now possible to safely host up to 48 lines within a home or office environment. If your needs grow larger than 48 lines, you can move your dialer to a data center.

Major Benefits

By purchasing your own dialer, you will be able to route your calls at true wholesale costs. If you are able to target any geographic location, you could route your calls to lower cost areas. This would allow you to get your costs into the sub-penny range.

You also benefit from the continuous improvement and development of The Dialer Cloud with regular updates. As we add more software, we will update your dialer to keep it up to date with the changes we make on the cloud.

Setup and Training

No experience is required to use our service. We will assist you with connecting your dialer to the network as well as training you on managing your online account.

We can also help you with finding the appropriate carrier for terminating your calls. Do not take that task lightly! Choosing the best carrier for your particular needs is one of the most important decisions you will make.

What Can The Dialer Cloud Do?

Currently The Dialer Cloud supports Voice Broadcasting capabilities. This would be campaigns such as Live Transfers, Voicemail Leads, Polls and Surveys, or Mass Notifications. As we grow the cloud we will be expanding with Predictive Dialing, Power Dialing, Virtual PBX, and Virtual Call Center.
