

Corporate anti-spam made simple with modusGate™ 5.20 for Microsoft Exchange™

Montreal, Canada, January 21, 2013 -- Vircom, an award-winning e-mail messaging security software company, has released modusGate™ 5.20, an email security and anti-spam filter software for Microsoft Exchange™ servers. The updated software adds protocol, domain and mail server auto-discovery to a new configuration console, enabling IT administrators to complete the setup process within minutes.

“IT administrators throughout the planet are overloaded with work. With this new version, we are effectively allowing busy administrators to setup a complex and high-quality corporate spam filter with no prior knowledge or expertise with the technology and the industry,” stated Damien Ramé, Director of Manager and Product Strategy at Vircom. “The new modusGate setup console will perform extensive auto-discovery of all parameters required to deliver efficient email security for their Microsoft Exchange servers. No need to become a subject expert or go through a 200-page manual. Download. Install. Done” Ramé added.

In addition to a simplified setup procedure, modusGate 5.20 also packs the latest version of the Norman™ Anti-Virus engine. The new version improves update cycles even further, providing better reaction to new threats, speedier updates, smaller package sizes, reduced scanning speed and improved detection for many 32-bit and 64-bit file formats.

Vircom's modusGate software runs on Windows platforms (2003/2008/2008R2) and is available to order today. For pricing or to request a free 30-day software trial, please visit the Vircom website: <http://www.vircom.com>.

About Vircom

Vircom Inc. is a software development and professional services company focused exclusively on email messaging security.
