The OSHA Training Center is pleased to offer its OSHA Training Courses at four Los Angeles Area locations. The OSHA Training Center is authorized by OSHA to deliver occupational safety and health training on behalf of OSHA. Students are able to earn and maintain their OSHA credentials as well as earn OTC Continuing Education Units which can be applied to many safety professional designations including the BCSPs CSP, CHST, OHST and ABIH safety credentials. Our instructors are industry safety professionals who bring the latest information, experience and techniques to our state of the art classrooms and incorporate real world experiences into classroom instruction and hands-on learning exercises.

Broaden your Safety Expertise with a Professional Certificate from the OSHA Training Center

The OSHA Training Center offers three levels of Professional Safety certificates to take your career and your organization's safety program to the next level. These courses provide focused, real-world information that can be immediately applied in your organization and give you knowledge in many safety and health topics allowing you to broaden your safety expertise.

Gain a solid foundation to quickly and accurately address the OSHA regulations affecting your industry and keep your company safe and compliant. This program gives participants certification of their knowledge and skills in understanding OSHA regulatory standards and in developing solutions to workplace safety challenges. Participants in the Safety Associate Certificate can tailor their program to reflect their own areas of interest through a selection of core required courses and electives.

If you are responsible for employee health and safety at your workplace, it may be time to expand your knowledge of current health and safety issues and regulations and learn new skills to create and maintain a safer work environment. The Specialist in Safety and Health Certificate Program is designed to expand and improve the practical skills of those responsible for employee health and safety at their facility. The courses examine critical safety and health issues of private business, industry and government, and provide training necessary for managing a proactive health and safety program. Participants in the Specialist in Safety and Health Certificate Program can customize the certificate program to their field of expertise and focus their training to their own areas of interest.

Businesses today face an overwhelming maze of safety and health regulations including employee safety, liability, training requirements, loss control, and program development and implementation. The Certified Safety and Health Official certificate guides you through this growing maze of increasingly important safety regulations by helping you develop your staff's expertise in safety and health strategies. Participants in the Certified Safety and Health Official certificate program can complete an OSHA certificate in either construction or general industry.
