

AED **(Automated External Defibrillator)**

An AED (*Automated External Defibrillator*) is a device that analyzes and looks for shockable heart rhythms, advises the rescuer of the need for defibrillation, and delivers a shock if needed.

According to OSHA, automated external defibrillators (AEDs) are an important lifesaving technology and may have a role to play in treating workplace cardiac arrest. To assist in addressing AED issues, information is provided below regarding occupational risk factors and the use of AEDs in the workplace.

***OSHA encourages employers to provide
AEDs in the workplace***

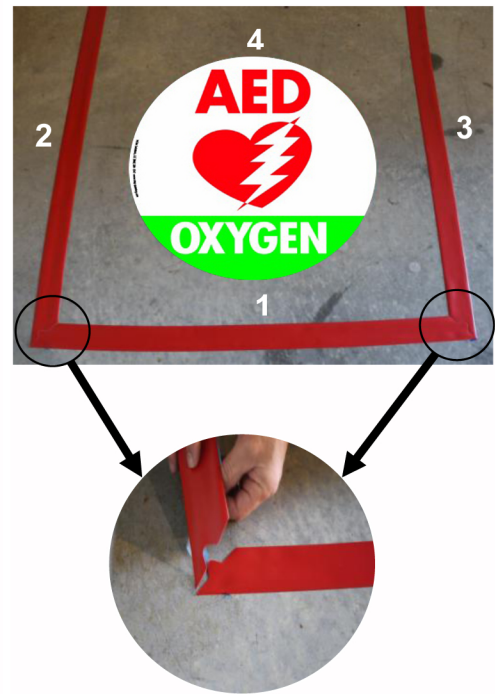

Helps rescuers through the entire resuscitation process with voice, visual, & text messages.

Uses a unified electrode pad that guarantees accurate pad placement.

Supports CPR effectiveness by measuring compression and depth rate - prompts rescuer to push harder if necessary.
