The Broadcastpod

Video technology is on the verge of transforming the way in which we communicate and operate both personally and in business. The desire for visual communication is creating a need for technology to support this human instinct. The Dreamtek Broadcastpod meets this need and confronts the limitations of video technology usage.

Due to the flexibility of the design, the Broadcastpod creates a conducive environment to delivering or recording a video broadcast, as well as providing a dynamic facility for videoconferencing. The Broadcastpod takes up minimal space and can be erected quickly and efficiently within an office environment, allowing the technology to be fully accessible to anyone in any location and due to the simplicity of the design users are self sufficient.

The Broadcastpod is available as a single camera unit (maximum 2 users), or as multiple camera units (3-4 person unit and 6-8 person)
