MEETING ROOM SCHEDULING SOLUTIONS

Navori QL is now officially referred to by - and compatible with - MICROS FIDELIO OPERA

Leading Digital Signage software solution NAVORI QL is now referenced by Micros Fidelio in their Hotel Room and Catering Management system, OPERA.

Interfacing both system enables to parse room scheduling information from the Micros Fidelio Opera application into a centralized per-room XML file source – thus allowing the interfacing and real time updating of all centralized or decentralized bookings in the system.

NAVORI QL Player software retrieves this information and can integrate and display this data feed in any type of content template or in overlay to mixed infotainment, advertisement, promotional or branding content.

The system can display a list of all meeting rooms' occupation data and display directions (way finding) at entrance or lobby level.

Screens at the meeting room entrance or on venue level can display location based information such as customer/meeting host name, occupancy timeframe etc.

NAVORI QL MANAGER keeps track of all these data in its renowned easy-to-use interface and timely and automatically removes data on past events.

Interfacing the NAVORI QL Digital Signage platform to the leading MICROS FIDELIO booking/catering back office system saves time and money and avoids human errors.

By simple rule of thumb: add up all local hotel staff's processing time cost to keep this essential information live on a Digital Signage system - then translate it to what dazzling figure this part represents in the operational costs on a yearly base.

This interface module is developed by Swiss based NAVORI and referred to as MICROS FIDELIO MF Part n° 5009-268 and is compatible with all MF OPERA suite PMS/Sales and Catering version 5.0.x and upwards.

It launches XML scripting that is imported and updated into NAVORI QL MANAGER and NAVORI QL Players automatically synchronize the hospitality data.

This integration is compatible with any NAVORI QL Digital Signage solution and the interfaced data can also be used in any interactive scenario such as personalized visitor badge read-outs (RFID – QCR), info kiosk systems etc…) and is another example that with NAVORI QL the communications scenario itself is the only limit in a Digital Signage deployment of any kind and size!

About NAVORI

Navori International SA is headquartered in Lausanne, Switzerland, and operates sales and support offices in North and South America, Australia and New Zealand, and Saudi Arabia.

With its latest software release, Navori QL, the company tops its 15 years of experience offering the most reliable and user friendly solution available on the market.
