

## Preliminary Results of TA-65 User's Survey

Telomeres are protective pieces of DNA material at the ends of every chromosome in every cell in the body. Telomeres, like protective caps at the end of our shoelaces, function to protect the integrity of the genome and preserve cell function.

As we age our telomeres shorten. Scientific studies have shown that short telomeres are associated with age related decline and dysfunction. Evidence clearly shows that people with long telomeres age healthier and live longer. The only way to lengthen telomeres is through the activation of an enzyme called telomerase. Currently the only way to activate telomerase is to take the [TA-65 supplement](#).

### TA-65 Users Survey Preliminary Results:

[The TA-65 User Survey](#) was carried out from October 2012 to February 2013. The multi-ethnic survey with an average participant age of 61 years, helped us to understand better, the benefits of the TA-65 supplement and minimum amount of time after constant use to show these benefits.

To evaluate the benefits of this natural product-derived telomerase activator TA-65, we analyzed data from 54 participants aged  $\geq 30$  yr, in 9 countries.

Each participant in the study completed a confidential survey that contained questions about observed changes compared with how they felt before, starting [TA-65](#). Questions were also asked about information detailing their current health status and behavior. This information was combined with their daily supplement dosage to form the baseline data for the study.

The TA-65 Users Survey included the collection of qualitative data gathered through survey research. A survey seeks to gather people's opinions by measuring their responses to a set of questions.

As we already know, the full spectrum of TA-65 benefits can only be seen after a taking the supplement for a minimum of 6 months. This study outlined the benefits seen in actual human subjects, during the course of the 6 months.

There were slightly more males (60%) in this survey than females (40%). The average age of respondents was 61 years. Survey participant ages ranged from the youngest participant who was 30 years old, to the oldest respondent at 83 years. All (100%) respondents were currently taking at least two TA-65 supplement capsules daily.

An overwhelming % of those surveyed (Greater than 80%) saw improvements in:

Immune function, mood and sense of general well-being, quality of their hair and were complemented by friends and family on improvements in their appearance.

75% of those studied experienced improved joint mobility, a reduction in joint pain, improved energy and greater exercise tolerance and endurance.

75% of the survey also saw improvements in the quality of their skin and had fewer colds (a testament to the improved immune function.)

50% of more of those studied saw improvements in their quality of sleep, vision and sexual Function.

If you have been taking [TA-65](#) for more than 6 months, we encourage you to take part in [TA-65 Users Survey](#). We welcome any feedback you can give!
