

Hear what you've been missing.

Wheelchair access used to come at a price: more road noise, a louder cabin ... and a lot of shouting instead of talking. With our new Quiet Drive™ technology, you'll be able to enjoy your BraunAbility minivan in peace and quiet at last. Have a conversation with a passenger in the back seat, a quiet chat up front, or just sit back and enjoy a ride that is up to 25% quieter than previous models. So go ahead – strike up the band and celebrate. Mobility has never sounded better!

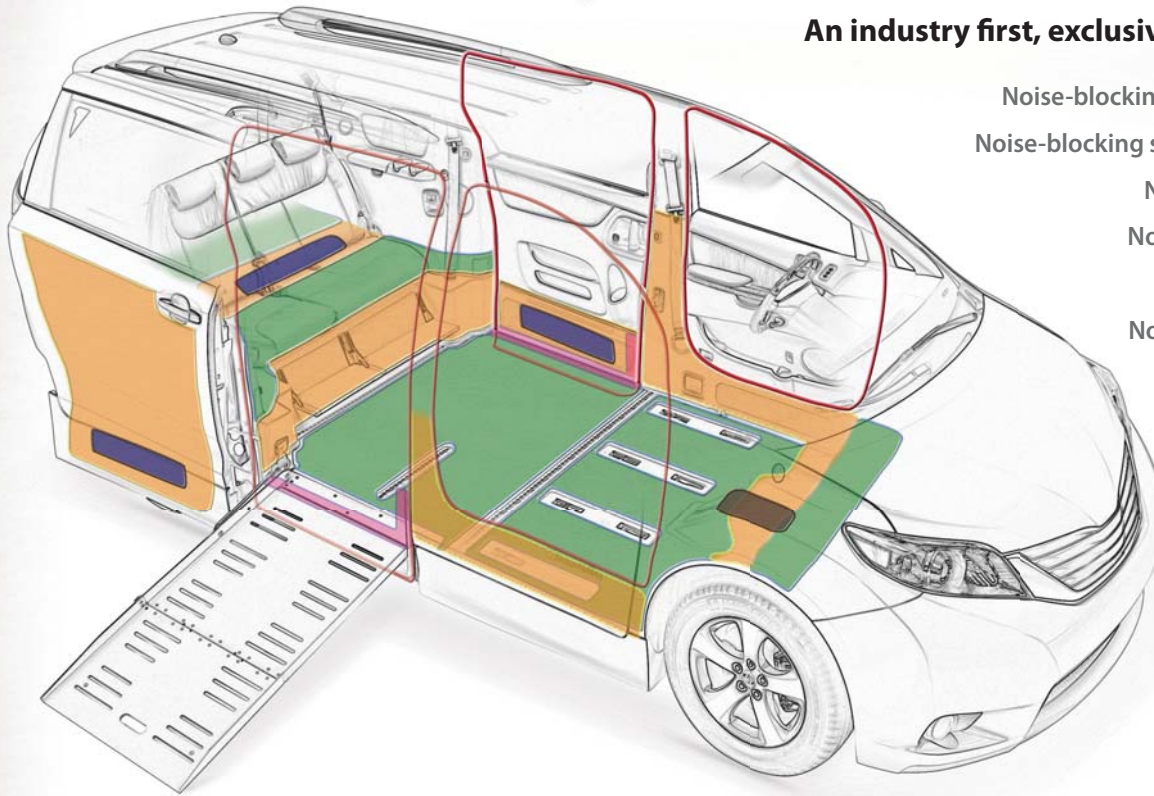

Now standard on all Chrysler, Dodge, Honda & Toyota accessible minivans.

An industry first, exclusively from BraunAbility

- Noise-blocking primary weather seal 
- Noise-blocking secondary weather seal 
- Noise-blocking material 
- Noise-absorbing material 
- Noise-reducer exhaust 
- Noise-blocking seam seal 

Mobility has never sounded better.

A groundbreaking technology offered exclusively on BraunAbility wheelchair vans, Quiet Drive™ reduces noise and vibration for a more enjoyable mobility experience. The acoustic technology and sound-attenuation materials deaden sound and vibration at the source. It's not an afterthought – it's a fundamental change in the way we build our accessible vehicles.

BraunAbility engineers have spent two years researching acoustic improvements and refining solutions at the advanced engineering facilities of Chrysler and Ford. The result is an up to 25% overall noise reduction.

Accessible transportation shouldn't come at the expense of an enjoyable ride. That's why Quiet Drive™ technology is now standard on every new BraunAbility wheelchair van. It's an improvement you'll have to hear to believe!

Here's how it works:

1. Primary seals are tested and secondary noise-blocking seals are installed.
2. Strategically-placed noise-blocking material stops sound before it enters the cabin.
3. High-performance noise-absorbing materials are placed inside interior paneling and open spaces.
4. The precise engineering and fit of the exhaust system reduces noise and vibration.
