

UV Flash

MIDBROOK MEDICAL

60 seconds

UV Flash can disinfect a wide range of everyday objects and items that are difficult to clean, including:

- Stethoscopes
- Oximeters
- Penlights
- PDAs
- Writing instruments
- Thermometers
- Cell phones
- Scissors
- Laptops
- Eyeglasses
- Blood pressure cuffs
- MARs scanners
- Oscopes
- Keys/ID cards
- Briefcases/satchels

UVC light

At a certain wavelength, 254 nm, UVC breaks the molecular bonds inside microbial DNA, producing deadly thymine dimers, essentially, destroying the germ.

Eliminate:

E.coli, MRSA, H1N1, SARS, pseudomonas aeruginosa, and many other pathogenic microorganisms. In studies going back more than 70 years, ultraviolet germicidal light (UVC) like that used in UV Flash® has been shown to kill more than 300 different germs, including bacteria, viruses, mold, fungi, and yeast. **There is no microorganism on earth that is resistant to ultraviolet germicidal light.**

UVC based infection prevention solution helps eliminate transient bacteria found on the everyday items and objects used and handled by healthcare workers. UV Flash is **designed to quickly and effectively disinfect** a diverse range of patient-care equipment as well as personal items of healthcare workers, all known to pose a risk of disease transmission and act as vector for hospital-acquired infections.

Needed in:

- Hospital nursing stations
- ICUs
- Clinics
- Medical Offices, & More

Disinfect and Sanitize with Light
