Authority Broker 4 Enhancements

Screen Capture

- Authority Broker 4.0 brings powerful tools for monitoring and creating visual audit trails of user activity. Using the Screen Capture feature you can:
    - Capture screens as users step through menus and enter commands.
    - Have screenshots automatically bundled as PDF and emailed to interested parties.
    - Watch user sessions in near real-time to ensure proper activity.
    - Play back captured screens on the system.

Comprehensive Reporting

- Traditionally, IBM i auditing is rendered useless if a user navigates into a non-command-based environment. Examples of these "transparent" environments include:
    - Interactive SQL
    - DFU
    - QSHELL
    - System Service Tools (SST)

- Authority Broker 4.0 addresses this shortcoming by:
    - Creating a visual log of a user's activity in all of these powerful environments.
    - Capturing a snapshot of each screen accessed.
    - Enabling comprehensive command reporting.

Auditing

- Authority Broker 4.0 also strengthens your ability to satisfy auditors by:
    - Capture screens as users step through menus and enter commands.
    - Have screenshots automatically bundled as PDF and emailed to interested parties.
    - Watch user sessions in near real-time to ensure proper activity.
    - Play back captured screens on the system.
