

Sustainable Backup Power Solutions

PHI eManagement Solutions and Revolution energy have bundled together a robust package to incorporate state of the art solar PV , micro-turbines, batteries and other technology to support any backup power system for commercial and government applications.

Our goal is to offer clients a comprehensive program to develop on-site power generation which significantly mitigates risk associated with power outages, improves power quality and reduces the facility's peak load. We are technology neutral and strive to provide a system and financial solution that fits the needs and expectations of our clients while increasing the facility's energy autonomy and reducing energy expenses.
