

Aviation Headsets

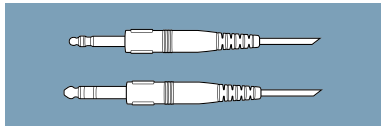

Liberate your ears

Choice of connectors

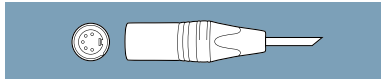

All Phonak aviation headsets are available with a choice of connectors. Such modularity is essential for pilots who enjoy flying different types of aircraft.

One headset + a choice of connectors = a unique solution.

Twin connector : PJ055 / PJ068

Single connector : XLR-5

Single connector : U174/U

Life is on

We are sensitive to the needs of everyone who depends on our knowledge, ideas and care. And by creatively challenging the limits of technology, we develop innovations that help people hear, understand and experience more of life's rich soundscapes.

Interact freely. Communicate with confidence. Live without limit. Life is on.

Phonak FreeCom

For a completely new and liberated feeling when flying, try a FreeCom headset by Phonak.

A FreeCom is the polar opposite of bulky ear-muff style systems. It fits comfortably inside the ear canal without enclosing the outer ear, which means no sweating under a bulky and heavy system and no uncomfortable pressure around the head.

Instead each FreeCom headset employs light-weight custom-molded ear shells. Made from hygienic clinical nylon, these provide unequalled comfort for as long as your flight lasts.

Why Phonak ?

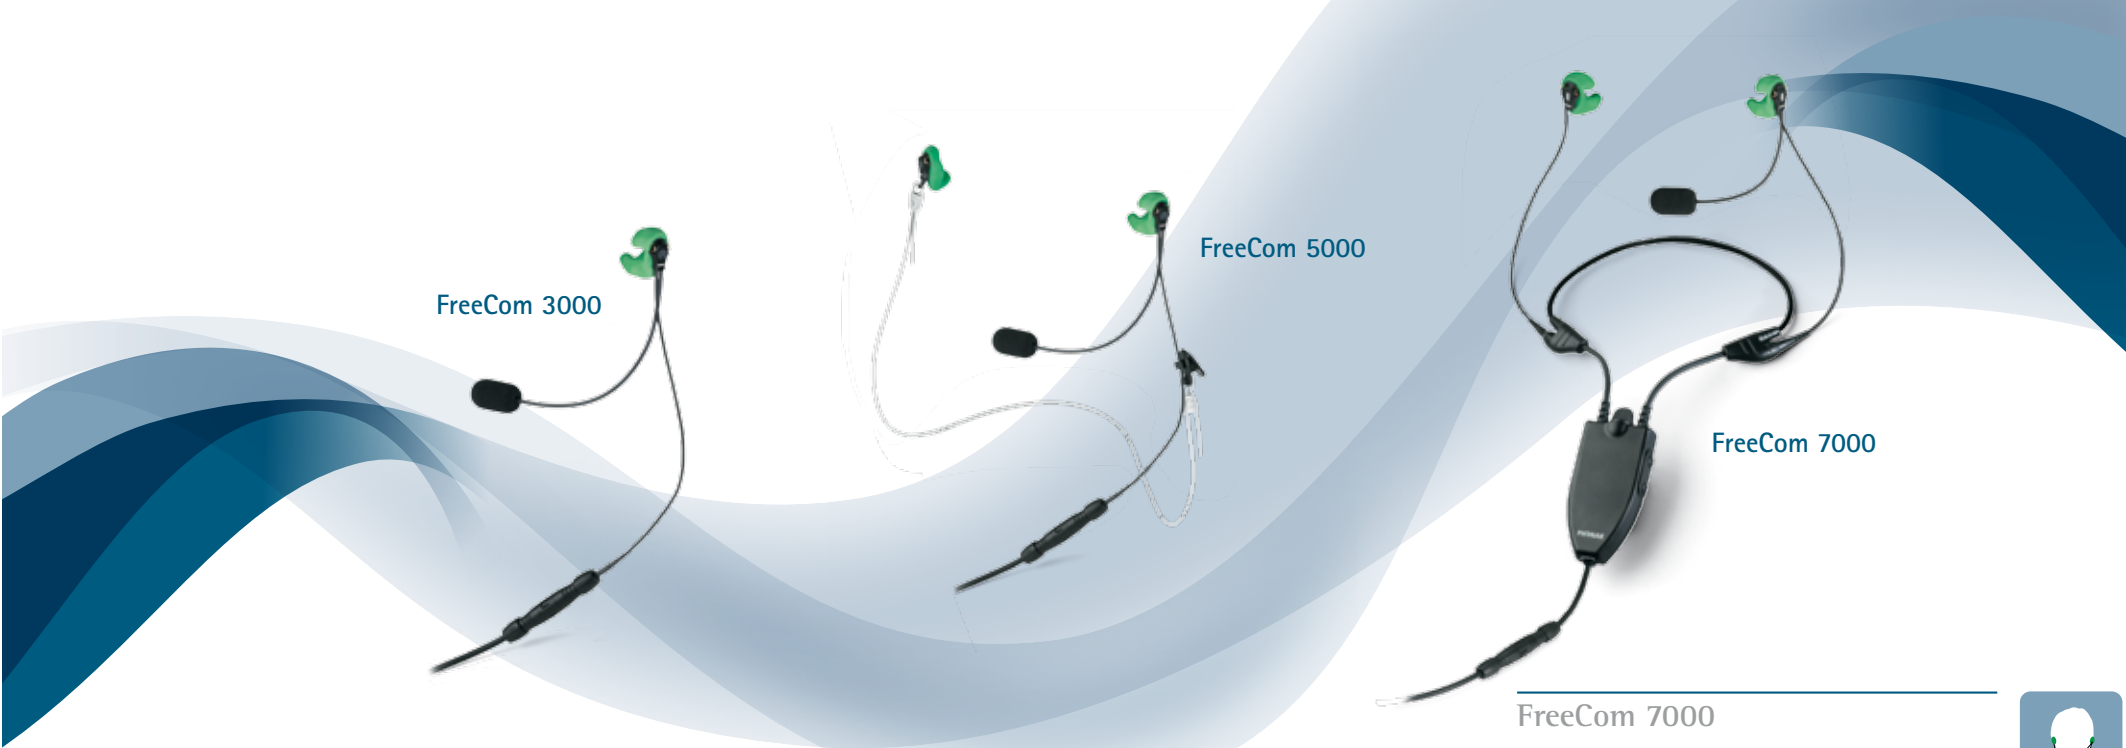

With 60 years of global experience, Phonak is the world's leading hearing healthcare company. Due to its background in hearing aids and related technologies its acoustic and audiological expertise is second to none. Phonak headsets and hearing protection systems are currently used by a wide range of customers, from helicopter rescue pilots and European soccer referees to security services and firefighters.

1) applies to custom shells only
2) batteries used for dynamic protection and ambient awareness features

FreeCom 3000

This ultra-light, single-sided boom microphone headset features excellent speech intelligibility and crystal clear voice transmission. Its custom-molded ear shell ensures a perfect in-ear fit and day-long comfort.

Suits: quieter flying environments such as jet cockpits, gliders etc.

- All-day comfort
- Excellent audio quality
- No covering of the ear, pressure or sweating

FreeCom 5000

This ultra-light boom microphone headset features built-in passive hearing protection and two custom-molded ear shells for day-long comfort. FreeCom 5000 is designed for use in the most demanding constant-noise environments.

Suits: noisy aircraft in which constant noise attenuation (dampening) is required, such as jets and propeller aircrafts.

- Passive hearing protection
- Excellent audio quality
- All-day comfort

FreeCom 7000

This state-of-the-art boom microphone headset features 'dynamic' level-dependent sound dampening, adjustable ambient awareness, excellent speech intelligibility and crystal-clear voice transmission.

With its natural hearing approach, FreeCom 7000 allows the quick localization of sounds and is perfect for challenging varied-noise environments.

Suits: any flying situation (quiet or loud) in which natural hearing is required.

- Dynamic noise-dependent hearing protection
- Natural hearing in quiet with adjustable ambient volume
- Custom ear shells also usable with FreeCom 3000 and 5000
