- Automation Software
- Medication Cabinets
- Supply Cabinets
- Bedside Solutions
- Refrigeration Units
- Computerized Order Entry Devices

3AM Technologies

## A Unique Closed Loop Solution for Medication Management

ServerRx™ Pharmacy Management System is a complete medication management system that provides a unique closed loop solution for medication management from order entry to medication administration.

The intuitive user interface of the ServerRx™ system is easy to learn and roll out to users. Its modular design allows you to customize the system according to your needs. Utilize the entire closed loop system or elect the individual components most relevant to your facility.

3AM cabinets maximize patient safety by using only one compartment for each medication type, dosage and route. When dispensing medication, only the prescribed medication is accessible. The ServerRx system ensures that only the prescribed medication is transferred to the patient's specific drawer in the SmartCart. At the bedside, the patient's drawer is opened only when the patient's barcode is scanned. This is a unique safety feature of the 3AM Bedside Solution.
