Common Core Assessment & Remediation Tool

Diagnose. Prescribe. Differentiate.

With the adoption of the Common Core State Standards, consistent academic benchmarks are being integrated in schools across the country to ensure that students face their future on a level playing field and ready for college or career success.

We're ready to help with tools that identify students' competency levels against Common Core State Standards and provide supplemental materials for targeted skills remediation and practice.

Data-driven Solutions That Bridge Learning Gaps

With this new diagnostic tool, educators can pinpoint Common Core skills with which their students are struggling, and provide prescribed instruction to bridge the gaps in multiple ways. The **Common Core Assessment & Remediation Tool** is

- **Skills-focused** with emphasis on one skill per lesson

- **Vocabulary-intensive** for student understanding and preparation for state achievement tests

- **Media-rich** to engage students with DLAs, audio, video, illustrations, and animation

- **Assessment-driven** with a single goal: ensuring students master the specific skill or concept

Designed to be used as part of a system that includes a diagnostic test, the **Common Core Assessment & Remediation Tool** uses engaging and effective lessons to approach content differently and can be used as supplemental material to build skills.

While academic standards have changed, ODYSSEYWARE's commitment to student success holds firm. We still believe that given the right tools and the right teacher, every student can achieve.
