

Onsite Energy Development:

Company Information

PHI eManagement, a Veterans Owned Small Business, is a renewable energy service integrator that supports the development of large-scale solar projects. Through our network of strategic partners, we have the capability to assess client needs, choose the best technology options, engineer, construct, and finance* systems. We are technology neutral so we are free to recommend the best combinations to our clients, including Solar Photo Voltaic (PV), Geothermal, Micro-Turbines/Combined Heat and Power, Solar Hot Air, and more.

In the right states, we can help you develop renewable energy options on unused space (land, rooftops, parking lots, etc.) through net metering and generate cash revenue.

Schedule a meeting today.

Initial Information Required :

- A copy of your highest monthly electric bill from the last 12 months
- A copy of your latest heating bill
- A copy of your usage profile that shows us your daily load chart for a week day and weekend (if you work on the weekends)
- Information about your current heating, cooling, and electrical systems

*Financing is based on 20 year Power Purchase/Thermal Purchase Agreements (PPA/TPA) or 10 year leasing options for qualified commercial clients.
