

## **Abletek announces new partnership with Meru Networks**

*Abletek is pleased to announce that it is a certified Meru Networks wireless LAN partner.*

[Abletek](#) is pleased to announce that it is now a certified [Meru Networks](#) wireless LAN partner. Meru wireless LANs are specifically designed for environments where high-density wireless traffic is generated by business-critical applications. Such conditions are accelerated in places where the bring-your-own-device (BYOD) trend is in full force and weak networks are unacceptable such as hospitals, airports, universities, schools, hotels and other enterprises.

Today, the BYOD phenomenon is pervasive. In all kinds of enterprises, IT managers are finding that wireless demands are beginning to exceed the capabilities of their current networks. Companies are experiencing the emergence of the distributed mobile enterprise, and the stress of an infrastructure that's unprepared. And they are turning to Meru for robust, cost effective solutions.

Able Technologies, Inc., a Texas corporation, doing business under the trade name "Abletek", was founded in December 1995. Over the past 16 plus years, Abletek has built a solid history of providing an uncompromising level of service, quality products, expert guidance and sound solutions to our clients.

Abletek is a technology solution provider to the small and medium size business community. We offer a variety of business technology including cloud based solutions, unified communications solutions, IT/Data, web development, proactive systems monitoring, management & support and advice.
