

Lingualia

Lingualia is a language learning social network based upon artificial intelligence to personalise and adapt the course to fit the needs of each and every student.

What is included in Lingualia?

Learn

Learn with didactic material

Lingualia includes 200 lessons comprising grammar, vocabulary, phonetics, and dialogue flashcards with around 8,000 different audios.

Lesson by lesson, students will gain a deeper knowledge of the language in a dynamic and practical environment. Their progress will be thoroughly monitored and a full evaluation provided highlighting aspects learnt, and aspects which require additional revision.

Lingu

Learn with an intelligent teacher

Lingu is a virtual teacher whose job is to personalise every detail of the course to suit the requirements of the student. With Lingu, students learn by “doing”, and from the mistakes they make. Lingu is always there to offer a detailed explanation and a helping hand in reaching the correct answer.

Connect

Learn with natives

Practise with natives to improve understanding of the language through a wide variety of activities, exercises and online games.

LinguLearning is a method designed to motivate students by personalising their language course and adapting it to their requirements.

Lingualia = Flexibility

Lingualia is a multiplatform tool available via web and iPhone. (App for Android coming soon!)

Lingualia is fully synchronised across all platforms allowing the user to learn languages for half an hour at home on their PC, and carry on for another five minutes via the iPhone app on the bus on the way to work. The synchronisation means they can pick up the lesson at the exact point where they left off on a previous device.

This way, the user can make the most of their downtime continuing to learn and practise their new language on the underground, on the bus, and even at the beach!
