## Dialer Termination Services for Carriers and Service Providers

**Dialer Termination** is a very specific traffic profile referring to short durational calls that are typically made from call centers and other service providers.

Most carriers, specifically Tier1 and Tier2, do not like dialer traffic on their networks due to the congestion and interruption it causes to the retail traffic. They prefer longer duration retail traffic to the shorter duration wholesale traffic.

Many large carriers have already banned dialer traffic from their networks and to make it “stick” they will charge heavy penalties for traffic that does not meet their minimum requirements.

This is why it is important to have a carrier specializing in dialer termination when your traffic profile consists of short durational calling patterns.

---

Dialtel has specialized in dealing with short duration dialer traffic since they started operations in April of 2004. They have developed a strong redundant network consisting of multiple carriers that are all dialer friendly.

Dialtel provides Carriers, Service Providers, Resellers, Call Centers, and other Voice Broadcasting companies with access to strong and aggressive rate decks that perform well with short duration traffic.

Switch your existing traffic to Dialtel or add us to your LCR to see how well we can help you save money while improving your termination.
