

cellboost® family of services

- enhances cellular signal indoors
- enhances radio signal for first responders
- provides high capacity wifi data

The apartment is great,
but how's the cell coverage?

Energy efficient construction materials that are designed to keep energy in often also keep radio frequency signals out.

Cellboost®'s carrier neutral design approach allows residents to receive cellular signal inside of your building, regardless of whose cellular service they subscribe to! The same design approach is used to boost 2-way radio signal for first responders throughout the building.

did you know?

there were 95,500 recorded apartment fires in 2011!

cellboost® first responder gives safety personnel the radio signal they need to stay in communication at your property. cellboost® first responder makes your property safer!

did you know?

1 in 3 U.S. homes only use mobile phones!

landline usage is decreasing rapidly - today's tech savvy renters and hotel guests are using their mobile phones as their primary method of staying connected. cellboost® allows your residents to receive optimum cellular coverage and unlimited data throughout your building.

cell**boost**[®] solves voice coverage issues that occur in large buildings.

2-way radio for first responders

for too long, first responders have gone without basic radio coverage in many buildings. lack of radio coverage puts the public and first responders at risk.

for communities requiring enhanced cellular radio coverage, cellboost[®] first responder solves the issue of radio coverage at a fraction of the cost of a typical DAS system.

how does cell**boost**[®] differ from a typical DAS?

- provides property-wide wifi and mobile data
- readies your properties for Passpoint/ Hotspot 2.0[®]*
- comprehensive IEEE802.11n dual band support with radio coverage.
- costs a fraction of a typical DAS system

*spot on networks[®] utilizes equipment that is certified by the WiFi Alliance for Passpoint/ Hotspot 2.0[®] - this will allow residents to seamlessly roam between wifi and cellular at your building!

why choose spot on networks?

not all wifi providers are the same - just like not all properties are the same. spot on networks is unique in the industry. we custom engineer, design and deploy networks that are as unique as your property. our secure, fully managed and monitored networks are solving the most pressing problems facing today's building owners.

spot on differentiators - what makes us better?

	spot on networks	other wifi providers
usersafe® wifi networks <ul style="list-style-type: none"> • custom engineered and designed network solutions • guards against hacking and identity theft • are fully monitored and maintained • provides unlimited high capacity data usage • offer tier 1,2 and 3 user support 24x7 	YES	no - spot on networks is the only wifi provider backed by usersafe® technology
cellboost® family of services <ul style="list-style-type: none"> • enhances cellular signal indoors • provides high capacity data coverage • enhances radio signal for first responders • costs a fraction of a typical DAS system 	YES	no - spot on networks is the only wifi provider offering the cellboost® family of services
wifiplus® smart building <ul style="list-style-type: none"> • usersafe® wifi network • energy management & monitoring • building automation & security • marketing services 	YES	no - spot on networks is the only wifi provider of wifiplus® smartbuilding solutions
