Connect with Oxygen Forensics During This Conference Season

Oxygen Software invites partners, customers, IT security and computer forensic public to connect with the company at one of the events. During this year, Oxygen is about to participate in many events in the USA, Asia, and Russia.

Oxygen Software will have a booth at PATCtech, CEIC 2013, TechnoSecurity + Mobile Forensics, ACFE Global Fraud Conference, ICCCF 2013, HTCIA and International Homeland Security Exhibition Interpolitex 2013. The company will hold one-day certification training sessions a day before or after the events.

EuroForensics 2013: a Big Success

Oxygen Software took part in the EuroForensics conference in Istanbul, March 27-29. The show was a big success. Oxygen met its partners and customers, showcased its existing and upcoming products, answered questions and collected valuable feedback. We spoke about "Challenges in Obtaining and Analyzing Full Communication Information from Mobile Devices" during the conference, and were amazed with the warm and welcome feedback received from the visitors.

The Conference Season

Oxygen is determined to connect with its partners and customers. This coming season, we'll be traveling around the world for a chance to meet with our clients and partners. From PATCtech in Seven Springs, PA to CEIC 2013 in Orlando, the largest computer forensic event in the industry, to TechnoSecurity + Mobile Forensics in Myrtle Beach, SC, we go on to the 24th Annual ACFE Global Fraud Conference in Las Vegas. From there, we'll head to ICCCF 2013 in Hong Kong, and return to the USA in September for HTCIA in Summerlin, NV. Finally, we'll participate in the 17th Anniversary International Homeland Security Exhibition Interpolitex 2013 in Moscow, Russia.

During the events, we'll be giving a speech on the Challenges in Obtaining and Analyzing Data from Mobile Devices for Investigations. Latest researches show that mobile applications usually store a lot of forensically important data with lots of contacts, messages, calls, and other types of information. To ensure timely and qualitative analysis of gigabytes of data it is important not only to choose an appropriate forensic tool but also to change the approach to the data analysis and its sources. During the speech, we'll be talking about the tools and approaches on acquiring and analyzing information extracted from some of the most popular mobile platforms.

Oxygen Forensic Suite User Certification and one-day training sessions will be held one day before or after each event. Please contact us to reserve a space in one of the training and certification sessions.

Please visit <http://oxygen-forensic.com/en/training/> to view the complete timetable of conferences, trade shows and training events held or visited by Oxygen Software this year. The list is constantly updated.

About Oxygen Forensic Suite 2013

Oxygen Forensic Suite 2013 helps investigators and forensic specialists access and analyze data from a variety of mobile devices such as cell phones, smartphones, communicators, PDA and tablet PCs. Currently supporting more than 6,500 different models, Oxygen Forensic Suite 2013 covers the widest range of mobile devices compared to competition, and allows fully automated acquisition and analysis of supported devices.

The unique Timeline feature offers convenient, single-place access to all activities and movements performed by the user arranged by date and time. Investigators can track user location at every moment, build and map their historic routes, and clearly see all activities performed by the user at each location. Timeline is now available for analyzing DMG images.

Another signature feature of Oxygen Forensic Suite allows investigators to perform a global search on all devices ever analyzed with the toolkit. The global search quickly reveals any connections (e.g. common contacts, exchanged calls, texts or emails) between the phone owners.

Oxygen's statistical analysis tools allow investigators discover social connections between the users of multiple mobile devices. Calls, text messages and Skype conversations are analyzed to produce charts and tables revealing the users' closest circle at a glance.

Oxygen Forensic Suite 2013 guarantees zero-footprint operation, leaving no traces and making no modifications to the content of the devices. This makes it the tool of choice among government and law enforcement agencies, security services, and forensic organizations in more than fifty countries.

About Oxygen Software

Founded in 2000, Oxygen Software is the worldwide leading maker of the advanced forensic data examination tools for smartphones and other mobile devices. The company is dedicated to delivering the most universal forensic solution covering the widest range of mobile devices running Android, iOS, Blackberry, Windows Phone, Symbian and other operating systems. Law enforcement and government agencies, institutions, corporations and private investigators, help desk personnel and thousands of private consumers rely on Oxygen Software products to ensure evidence availability in the event of mobile device data analysis and recovery. Oxygen Software customers include various US and European federal and state agencies such as the IRS, US Army, US Department of Defense (DOD), US Department of Justice, US Department of Homeland Security, US Department of Transportation, US Postal Service, US Supreme Court, European Commission, London Metropolitan Police, French National Police and Gendarmerie, PricewaterhouseCoopers, Ernst & Young, and many others. As a result, Oxygen Forensic Suite receives great response at forensic conferences, exhibitions and trainings, and occupies a spot on the top of the list in relevant tests for extracting more data than competitors.
