

iPhone **iBillfold2**.com

From day-to-day, user's needs change, in turn, the tools they use must change in order to stay useful and relevant.

The solution - [iBillfold2](#).

All innovation begins with the discovery of a problem.

The lack of functional and versatile integration of a smartphones physical protection and cash/card management system while maintaining aesthetic integrity.

The iBillfold2 Solution

The iBillfold2 iPhone Credit Case is a minimal phone case that protects your phone and allows the user to carry a credit/debit card, a license and some cash without taking up much pocket real estate. **The iBillfold2 Wallet** is a premium leather wallet/money clip that has 4 interior card slots and a money clip. The iBillfold2 wallet also has 2 card slots on the exterior. Lastly the iBillfold2 wallet has a magnetic clasp to keep interior contents safe.

At this point you might say that aside from a well-designed set of products there is nothing that differs from existing competing products. What makes the iBillfold2 unique is the fact that the case can be easily connected to and disconnected from the wallet. The beauty is that both products can be used independently or together. No other product like this exists, to our knowledge, and works so fluently.

I carry a protective iPhone Credit Card Case, But I carry a wallet too! [iBillfold2!](#)
