

More Information about Mitchell Humphrey & Co.'s FastTrackGov® Permitting Solution

Our *FastTrackGov (FTG)* Permitting solution is designed to centralize processes for government organizations by eliminating piles of paperwork. Now your documents no longer have to be shuffled between departments, inhibiting accessibility, and wasting time.

FastTrackGov, developed by Mitchell Humphrey & Co, provides state and local government organizations with an easy-to-use, feature-rich suite of web-based community development software solutions for Permitting, Licensing, Code Enforcement, Inspections, and Citizen Request Tracking. The *FastTrackGov* Permitting solution is specifically designed for Construction Management, Zoning, Land Use, Licensing, Code Enforcement and other departments involved in the Permitting process.

Basically, *FastTrackGov* is a complete solution that speeds up the entire permitting process for citizens and government agencies. Citizens can submit applications, make payments, communicate, and check status on-line. Inspectors and other personnel can access data and update the system from the field, even when not connected. Everyone works via a centralized data base, which accommodates the smallest to the largest local governments.

FastTrackGov provides all necessary data at your fingertips, and because it is updated in real time, any authorized user can see the status of permits or projects at a glance. Data is easily shared among departments so that citizens, office staff, managers and inspectors can work together fluidly. The system accommodates even the most complex fee computations all the way through the process. This eliminates manual errors and maximizes revenue.

Clients are saying, "Mitchell Humphrey's software is like a rock... Mitchell Humphrey's software has never failed us... The Microsoft CRM automation tools, within *FastTrackGov*, will increase our productivity."

All of our software solutions are designed and maintained by a team of in-house developers, consultants, and support staff who can customize each system to streamline your workflow processes. We are a "solution provider", not just a "software vendor" and with over 35 years of personalized software development experience, we know technology from the ground up and we understand what our clients need to streamline their business.
