

Dashlane is the world's best password manager and universally accepted secure digital wallet. Dashlane enables users to securely store all of their passwords, ID's and payment information, as well as provides a security dashboard which analyzes and displays weak and reused passwords. All user information is secured with military grade AES-256 encryption; an encryption method that has never been hacked.

In addition to its unsurpassed security features, Dashlane provides users with a beautiful user interface and seamless user experience. Using Dashlane does not require any toolbars, or unnecessary buttons, so the user browsing experience is not impeded in any way. Dashlane also features industry leading automatic form filling and express checkout, which removes the friction of tediously filling out forms when shopping or registering online. Dashlane is cross-platformed and can be synced on multiple devices.

Dashlane was founded in 2009 by Bernard Liautaud, the co-founder and former CEO of Business Objects, which was acquired by SAP for \$6.8 billion. In September 2011 the company raised a \$5 million Series A round that was backed by Rho Capital Ventures, FirstMark Capital as well as Mr. Liautaud. Dashlane has 35 employees who hail from 15 different countries.
