# DATA PROTECTION SOLUTIONS

## MISSION

Our mission is to create added value in the IT security space. To ensure that sensitive corporate information is always secure wherever it resides and regardless of whether it is stored, moved or used. At SECUDE, we're devoted to identifying and closing the security gaps that exist in today's corporate IT environments by providing the technology, powerful management tools, and 24/7 support to ensure complete security that never gets in the way. From within the perimeter, on mobile platforms, and within the cloud we KEEP IT CONFIDENTIAL.

## VISION

We keep your sensitive corporate information confidential on any platform across any device now with the power to seamlessly manage your data with secure Information Access Management for On-Premise, Cloud and Mobile. It's security at the speed of business.

Imagine keeping all your key information assets secure, no matter where they reside or how they're used. SECUDE provides integrated security solutions now with the power to seamlessly manage them so they never get in the way of doing what you do best... run your business.

## STRATEGY

SECUDE delivers a strategy of "embracing and extending" the existing security infrastructures of organizations. Founded in 1996 by SAP and Fraunhofer and based in Switzerland, SECUDE, is a leading global IT Security Solutionist. SECUDE combines the knowledge of enterprise IT infrastructures, particularly SAP environments, with deep security expertise. We provide integrated security solutions and the power to seamlessly manage it so it never gets in the way of running your business. We "extend" existing IT infrastructure such as SAP's ERP environment, Microsoft Windows infrastructures, and Mobile Device Management solutions. These products are flexible to adapt to customer requirements and can be easily integrated with business processes that protect data-in-use, data-in-transit and data-at-rest, such as encrypting documents once they leave the SAP environment and protecting mobile devices.

## PRODUCT STRATEGY

Our product strategy is focused on providing security solutions to protect sensitive corporate information regardless of where it's stored—including enterprise systems like servers, as well as endpoints like laptops, PC's or mobile devices. Our secure functionality goes beyond enterprise borders and across platforms to communications between enterprises and third parties (collaboration and federation issues). For security that extends beyond enterprise systems and corporate perimeters and the power to seamlessly manage it all.

## SECUDE provides an integrated portfolio of data security solutions.

SECUDE bridges the gaps that exist in today's corporate IT environments by providing the missing puzzle pieces for comprehensive data security infrastructure.

Our goal is to protect your data, no matter where it is stored and no matter how it is accessed, so you can focus on running your business!

---

**FinallySecure Enterprise** is a flexible data protection solution that encrypts entire hard disks or partitions at the sector level securely and efficiently. Additionally, FinallySecure Enterprise can enable pre-boot authentication, which authenticates users before the launch of the operating system via a password or smartcard.

**SecureFolder Enterprise** is a shared folder encryption solution that protects sensitive corporate data computers, network drives, and in the cloud. This transparent encryption solution provides an additional level of authorization alongside the default file system permissions. SecureFolder Enterprise prevents unauthorized users and administrators from gaining access to confidential information such as personal or financial data. SecureFolder Enterprise integrates seamlessly into Microsoft Windows without requiring changes to the file system structure, which ensures that data backup and restore services are not affected.

**SecureDocument** bridges the gap between SAP security and the rest of your IT landscape by using Microsoft's Active Directory Rights Management Services to automatically apply Information Rights Management (IRM) protection to data downloaded from SAP. The data classification mechanism is based on SAP's existing roles and authorization model to protect files, of any type or extension, coming out of SAP.

**SecureFolder Mobile** is a mobile data protection solution that has been specifically designed to provide secure access to shared data stored inside the corporate perimeter or in the cloud. Its cross-platform architecture allows secure data access from workstations and mobile devices.

**SAP NetWeaver Single Sign-On** is a modular productivity and security solution for SAP that combines secure authentication, single sign-on and data-in-transit encryption.

## ABOUT SECUDE

SECUDE is an innovative global provider of IT data protection solutions. The company was founded in 1996 as a partnership between SAP AG and the Fraunhofer Institute in Germany. Fraunhofer is Europe's largest application-oriented research organization. In early 2011, SECUDE sold SECUDE Application Security to SAP AG, to focus on its core competency: Endpoint Security. SECUDE helps customers protect sensitive data from loss or theft and to meet legal and industry requirements and guidelines. Since 2011, SECUDE has been part of the SAP® PartnerEdge™ Value Added Reseller program and an SAP distribution partner in Germany, Switzerland and the USA. As an SAP Value Added Reseller (VAR), SECUDE sells licenses, consulting and implementation services for the SAP NetWeaver® Single Sign-On solutions in addition to its own product portfolio. Today, SECUDE is trusted by a large number of Fortune 500 companies, including many DAX companies. Bringing together best global talent in the IT security industry, SECUDE has offices in Europe, North America and Asia.
