Staff Tag

Lightweight, Comfortable, Configurable Buttons, Two-Way Communications

Enhancing School Safety:

Providing hands-free Access control, rapid notification of threats, precise location, automatic lock-down, and demographic visibility

Protecting our children and assuring their safety in schools and in school busses is everyone's first priority. GuardRFID's security solutions are tested and proven at keeping infants safe in hospitals around the world, and doing it economically.

The GuardRFID K-12 SafeGuard system is a state of the art advanced asset (human and physical) security solution designed specifically for K-12 schools and similar educational institutions. It includes:

Special staff badges that can both transmit "code reds" and receive alert notifications.

Ability to establish zones and then immediately lock down vulnerable areas.

Supports local and remote monitoring, with instantaneous notification of a possible threat.

Real-time dashboard of the location of every badge to enable effective crisis response.

SafeGuard can be used to track and secure valuable assets, both people and equipment.

GuardRFID's SafeGuard solution can be implemented quickly and economically, ensuring that your school, and most importantly, our students and teachers have an advanced level of safety.

Contact GuardRFID to find out how you can use Active RFID technology to elevate your student and staff safety to the next level.

Advantages

- Instant notification to local and remote Security agencies using portable Staff Badge.
- Locate source of notification with typical accuracy of 2-4 m (6-12 ft).
- Zonal lock-down capability to immediately secure vulnerable areas.
- Automatic transmission of incident in progress to all Staff Badges for rapid initiation of security measures.
- Real-time view of the demographics within incident site for more effective response activities.
