

## **Odesia Interfacing Enterprise Process Center® is included within the 2013 Operational Intelligence Platforms by the Leading Analyst Firm**

MONTREAL (Quebec), May 15, 2013 – Interfacing Technologies Corporation part of the ODESIA Group (TSXV: ODS) is pleased to announce that its award winning business process management software, the Enterprise Process Center® is now included by Gartner® within the list of leading commercial Operational Intelligence Platforms.

“Operational intelligence platforms are new products that IT leaders can use to reduce the time and cost required to implement monitoring, alerting and adaptive decision-making. They help companies improve their situation awareness and ability to sense and respond quickly to changing conditions”, states Mr. Roy Schulte from Gartner.

EPC 8 goes beyond Business Process Management towards bridging the gap between the BPM & BI marketplaces. EPC 8 is considered as the first step toward Interfacing’s visionary solution the iEPC (intelligent Enterprise Process Center). iEPC is an Operational Intelligence platform that allows organizations to align strategic goals and objectives with everyday operations and monitor the health and performance of their business.

“There is a real need in the market for a BPA solution that takes the “intelligence” out of the hands of the analysts and puts it into those that really need it the most within their day-to-day operations. Providing business with the ongoing performance visibility and insight to pin-point the areas whereby the issues lie, will allow those responsible and accountable to make quicker & better decisions. iEPC gives control to operations to own their processes and is truly the next generation of continuous improvement tools”, states Mr. Scott Armstrong, VP of Strategic Direction and Business Development for Interfacing.

Odesia Group acquired Interfacing Technologies in May 2012 to achieve its Unified Business Intelligence (UBI) vision by consolidating both Interfacing’s BPM Solutions and Odesia’s BI Expertise. Hence, developing Operational Intelligence Platform falls within the mission and vision of the company and represents a long-term market commitment from the top management. “Today, because of our significant investment in Research, Development and Innovation our UBI vision is becoming a reality and Gartner’s recognition is an excellent reward for the efforts and energy we invested”, declared Mr. Nicolas Bonnafous, CEO & President of Odesia.
