KnowledgeLake Connect

Improve employee productivity, lower costs and drive SharePoint adoption by empowering employees to interact with Microsoft SharePoint content directly from their Microsoft Office desktop applications.

This enterprise-ready solution delivers an unsurpassed end-user experience that empowers employees to rapidly upload, manage, search, view, collaborate and explore all SharePoint content directly from their Microsoft desktop. Capture documents directly from the suite of Office applications including Outlook, Word, Excel and PowerPoint, without having to open or view SharePoint.

Reduce frustration while gaining productivity.

Nearly all employees agree that the out-of-the-box SharePoint user experience for uploading, finding and interacting with content can be cumbersome, time-consuming and frustrating.

Designed from the ground up to meet the needs and ease the frustration of information workers, **KnowledgeLake Connect reduces keystrokes and time up to 60%** over the traditional content upload process into SharePoint.

No end-user SharePoint knowledge necessary.

Information workers use this robust solution for on-ramping content into SharePoint, applying metadata, browsing and viewing SharePoint content from a single desktop application.

Key benefits:

- | Accelerate your ECM objectives while driving SharePoint user adoption
- | Increase efficiency and reduce costs by optimizing the process for collecting, creating, managing and retrieving all content, including emails, across the entire enterprise
- | Lower legal and regulatory risks by classifying and storing content in an orderly manner and making it easily accessible for compliance purposes
- | Increase the return on your SharePoint and Microsoft investments
- | Integrate with existing business, CRM and ERP systems
- | Flexible deployment options include on-premises and Cloud/Office 365 environments; does not require any server-side installation

Using KnowledgeLake
Connect's Microsoft
Office Add-Ins

KnowledgeLake Connect is Microsoft Outlook for SharePoint

KnowledgeLake Connect provides seamless integration between Outlook and SharePoint allowing users to easily manage email messages and attachments. Without ever leaving Outlook, users can save emails and attachments in SharePoint and automatically capture email metadata using drag and drop functionality.

Explore, view and manage SharePoint documents straight from your desktop

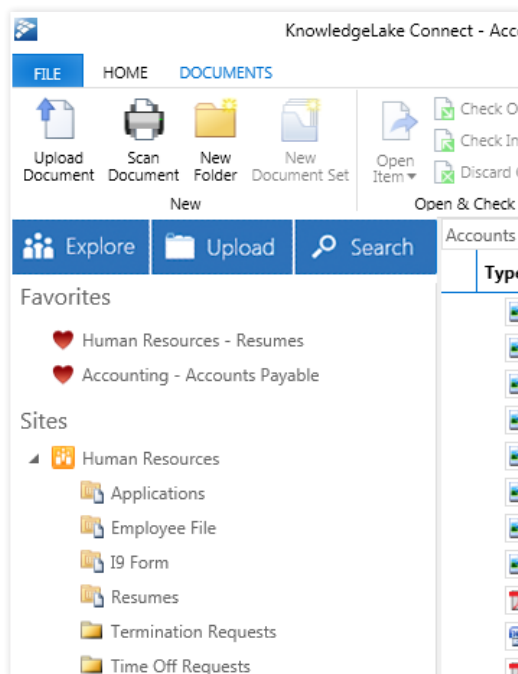

Access all SharePoint content from a single application

Save time and keystrokes when viewing documents and managing SharePoint properties without launching native applications with the lightweight KnowledgeLake Connect Viewer

Save content - such as Office documents, PDF files and e-mail messages, on an ad-hoc basis, in a single step

Perform keyword or metadata searches of SharePoint content

Take advantage of saved SharePoint searches and create "Favorite" searches on the fly

 **SharePoint**
for Everyone

Technical Highlights

Easy and quick installation
process complete with configuration wizards

Little to no end-user training
and limited end-user support requirements

End-users can **interact with multiple SharePoint environments** (2007, 2010, Cloud/Office365) in a single, consolidated view

Take advantage of **automatic indexing and data validation** for increased accuracy and efficiency

Connect to on-premises SharePoint sites, or to cloud-based Office 365 sites, without needing to install additional software on the server

My experience with the KnowledgeLake team and with the Connect solution, has been nothing short of a great experience. I am always looking for ways to make life easier for my clients and especially for me. From the excellent installation and configuration process to the impressive functionality and ease of use, KnowledgeLake Connect has helped me accomplish this. I look forward to seeing what's next for this exciting product.
