Count   Scope   Cycle Counting   Merge   Provision   Rapid Sync

Point Inventory is designed to work with any Android or iOS device. Users can now leverage the devices they know and love yet enjoy the robust capabilities of the most advanced mobile inventory solution on the market. Point Inventory has crossover platform compatibility with a mirrored offering for all Android/iOS mobile devices and tablets.

Usability
Point Inventory delivers the critical functionality to execute a physical inventory count with efficiency and precision. Users can perform cycle counts, spot checks or full inventory counts efficiently and collaboratively. The Rapid Sync engine delivers count data to the cloud for global visibility. Reporting and analytics are available in real time!

Control Point
Point Inventory is not just a mobile application but rather a seamlessly designed inventory management solution to capture, analyze, report and post count data to your POS or line of business application. Mobile devices and tablets can be easily added to the count by email invitation to download the app. Admin users can manage access control to trusted users and devices and view posted data from any internet browser.

Scope
Control Point allows Inventory Managers to define the scope of the count using filter criteria and parameters of their choice such as items in a specific location (or sub location), from a specific supplier, department, category, price range, type or any other custom filter criteria. Custom scope parameters can be saved for repeated use, saving valuable time.

Efficiency
Point Inventory eliminates mundane saving tasks by leveraging our Rapid Sync technology to post count data to the cloud in real time. The Control Point houses the count data, user profiles, register configurations, reports and administrative tools. The seamless integration between the device and the Control Point ensures no data is lost in the event of a hiccup in wireless connectivity.

Integration
Point Inventory delivers flexible and intuitive functionality, making it easy to use and extremely efficient. Every aspect of Control Point was designed with the user in mind. The simple user interface significantly reduces the user ramp-up time, manages process workflow via the navigation and leverages meticulously designed and engineered line of business adaptors to post data to your POS or ERP applications.
