jama build great products™

JAMA FOR IBM DOORS
DATA SHEET

Organizations are constantly looking for new ways to improve how they deliver on projects and out-innovate their competition. Today's modern tools offer new opportunities to transform the way you conceive, scope, build and launch great products. Smart teams pick Jama when they are ready to stop suffering and graduate from legacy tools that no longer meet their needs.
Where do you start? When? The "if it isn't broken don't fix it" philosophy poses a real risk to your business and can cost you significantly more to migrate when it becomes critical.

STOP WORKING THE OLD WAY

Now is a great time to move off IBM DOORS. Jama can help. Move to a cutting-edge, more cost-effective technology for improved efficiency, faster delivery and better quality.

Don't lose all your past work but focus on the important information. Bring along the requirements, test cases, and other information you care about. The Jama for IBM DOORS migration solution will maintain all relationships, so you can easily configure or change any elements.

HOW DOES IT WORK?

1. Export the modules you care about from DOORS.
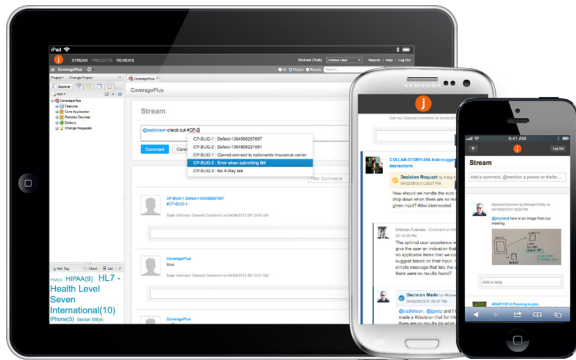

2. Zip up the HTML file & images.

3. Import the file into Jama, selecting the fields you care about and pick where you want the data.

DO IT YOURSELF OR LET US HELP

The DOORS migration capabilities are built into Jama so professional services aren't required to transfer your data. You can do it yourself, on your own time. Or let us help; Jama best practices consultants can advise you on how to integrate your data into your new way of working using Jama.
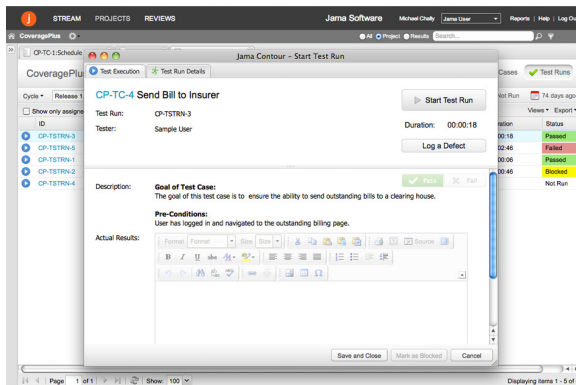

BUILD GREAT PRODUCTS WITH JAMA

Jama is an industry-leading requirements and test management solution with an enterprise collaboration layer that brings in stakeholders to drive easy adoption and organizationwide clarity into what you are building and why. What makes Jama unique is our focus on simplicity, flexibility and collaboration.
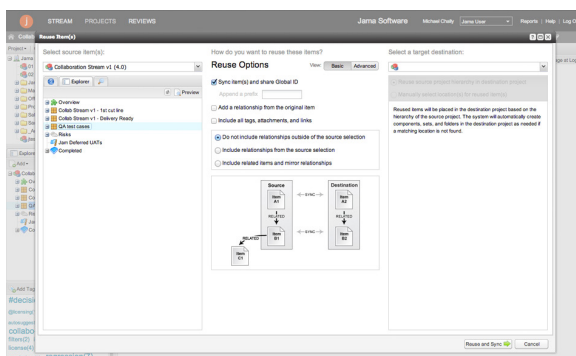

CAPTURE BUY-IN AND APPROVALS FASTER

Connect teams with stakeholders through a simple interface and mobile accessibility to get requirements right, faster. With Jama Review Center, join a real-time discussion, propose edits, flag issues, vote for prioritized features, and ultimately approve and electronically sign-off on requirements for an official record of the agreed-upon scope.

ENSURE PRODUCT QUALITY

Execute test plans and track defects back to requirements. With Test Center, QA teams execute test plans that directly associate with requirements and features. Coverage Explorer visually represents the impact on features of outstanding defects.

SAVE CRITICAL TIME

Create a centrally managed library of reusable product details that automatically updates product teams across the enterprise so you can get your next product to market faster and out-innovate your competition. Enterprise Reuse keeps requirements synchronized and in context alongside associated changes, comments, reference items, decisions and other related information.
