Cerulean Control Panel

Cerulean offers swift, time-saving, hassle-free maintenance for companies who need to provision and monitor Virtual Machines instantly.

We were born to do this

Think cloud. Think Reviora.

Why be grounded by hardware limitations? **Cerulean** provides you and your team access to unlimited virtual technology and applications, creating the ability to run any platform, from anywhere, for any number of users. **Cerulean** lightens your workload with a Silverlight web-based Cloud Control Panel supported by Hyper-V, VMware, vSphere, and XEN that enables you to provision Virtual Machines and Software Applications in minutes rather than days using preconfigured templates for improved productivity. Schedule workload updates, backups, snapshots and cloning. Securely park your unused environments on a file system to save money, provision machines for limited and unlimited periods, and manage public and private clouds all from one management portal.

Cerulean is, quite simply, the fastest and the only Cloud platform you and your company will ever need.

For Enterprises:

- Expedite SaaS projects
- Bring Customers Online Instantly With Their Own Control Panels
- Better Ease of Use
- Monitor Software Usage and Historical Data

For Hosters:

- Manage and Monitor ISVs
- Scale Out Your Private and Public Clouds
- Quickly Connect with Customers
- Improve Customer Satisfaction

Cerulean is a Web-Based Cloud Control Panel that enables you to provision applications and virtual machines in minutes rather than days. Create and manage your own cloud infrastructure at a low cost. Work more efficiently by using preconfigured templates and live support. Stay up to date using automatic updates and upgrades, take snapshots, perform backups and cloning from one panel. Park your data to a file system indefinitely and monitor your system from anywhere at any time.

FEATURES:

Self Service— Easily add, remove or upgrade virtual machines, administrators and technical users to your development environment. Scale-out or scale-in business applications with a single click. Keep your environment up to date with automatic patch management service.

Template Gallery— Cerulean provides a comprehensive gallery of hundreds of development environment and business application templates configured to facilitate Rapid Start, improve productivity and accelerate product development. Cerulean golden image templates are useable across all public clouds including Google and Amazon.

Environment Monitoring— Real-time dashboards simplify forecasting, detection and trouble-shooting capacity bottlenecks. It also allows you to view historical events, alerts , CPU, Network IO and Disk usage as well as offers comprehensive management of your environment and business solutions.

Automation– Cerulean automates resource backups, snapshots and cloning, as well as builds creation and deployment to the integration server for product testing and release. It provides an end-to-end solution for application development life cycles, saving time, reducing human errors and increasing efficiency.

BENEFITS:

•Enables you to build Development Platforms and Business Applications in the Cloud without going into configuration complexities.

• Saves time, money and resources and retains complete control of your IT assets while Cerulean delivers cost-effective infrastructure.

•Take advantage of Rapid Start to Product Development with hundreds of pre-built templates.

•Self Service allows your administrators to easily manage, monitor and view the health of your development platforms and business applications.

•Empowers you to park your Development Platform and Business Application on a file system and restore it as needed.

Cerulean is a Control Panel for Hosters and Enterprises that provisions virtual machines in minutes rather than days, enabling you to monitor your system from anywhere, and run any platform for any number of users.
