Innovative ECG Catheter Tip Placement

Nautilus® helps you find your way, providing accurate, real-time PICC tip confirmation.

Proven ECG Technology

A clinical study involving 334 varied patients shows that ECG placement technology has a 97.3% success rate for placing the catheter tip correctly first time¹.

Real-time Tip Confirmation

- ⚡ Allows consistent optimal placement
- ⚡ Eliminates the wait for X-ray tip confirmation
- ⚡ Reduces patient exposure to radiation from X-rays
- ⚡ Eliminates tip re-positioning
- ⚡ Reduces therapy time and associated on-costs.

Don't Just Take Our Word For It...

“The Nautilus® real-time tip placement system is beneficial in so many ways. For the practitioner, it gives immediate feedback on where your line tip is. For the patient, the central venous access device can be used immediately, and because you do not need to use a chest X-ray to check the line tip location it also saves on-costs. An all-round winner in my opinion!”

Clinical Nurse Specialist - Haematology and Oncology
University College London Hospitals NHS Foundation Trust

Label printer

Catheter tip confirmation for patient records.

Nautilus® machine

Compact, portable design for easy transportation.

ECG cables

High quality ECG lead with four colour-coded clips.

Remote control

For improved sterility and single operator use.
