Business Continuity

SQUIRE TECH Solutions, LLC

Back Up and Full Time Communication Solutions

Reliable broadband satellite communications for remote and backup operations is critical for any company. Field teams and business operations staff need to communicate to perform their function. Without phone's, data, Internet, or other critical resources most businesses will not be able to function. Squire Tech Solutions' Business Continuity Communications integrates with your existing communication systems to ensure connectivity where and when you need it.

Squire Tech Solutions' Business Continuity (BC) Equipment Packages and Service Plans offer low satellite latency, high quality audio and video for live business applications. Our small antennas fit easily on any building, ground mounted pole or Company Office Trailer. Resilient VSAT hardware operation free up valuable time to focus on other vital response tasks. Bandwidth can be available in days rather than months or weeks. User friendly satellite communications operates just like DSL, Cable, or any other IP Network. No special skills are required. BC systems are ideal for any critical operation. Field teams and business operations staff need to communicate to perform their function. They cannot without relying on phone lines, Data, Internet, or other critical resources. Squire Tech Solutions' Business Continuity Communications integrates with your communication systems to ensure connectivity where and when you need it.
