

AtomOrbit launches TeamFusion for Microsoft SharePoint

How SharePoint does BYOD via TeamFusion

Seattle, WA — Aug 12th, 2013 — AtomOrbit, an innovator in Microsoft SharePoint BYOD Solutions, today announces the official release of TeamFusion. TeamFusion was created to provide a solution for two major hurdles in SharePoint usage -- a device agnostic feature-rich user experience from any size device and a ground breaking immersive user experience. TeamFusion uses highly responsive HTML5 so that the user experience is uniquely tailored for mobile phones of all sizes, tablets and desktops. All of this is done with device agnostic browser standards making it feel like a native app but without plugins or anything to install on the device.

TeamFusion provides an immersive user dashboard which seamlessly blends together SharePoint data like Announcements, Lists, Calendars, Blogs and Events right alongside non-SharePoint business data from legacy on-premises or cloud-based sources. The TeamFusion vision is to be the BYOD platform for end user business productivity to help customers maximize their SharePoint investment. Our roadmap includes support for Microsoft's enterprise social products including Dynamics, Office 365 and Yammer.

"From our years of creating custom solutions for SharePoint we recognized two major trends with our customers: one, they were looking to upgrade the user interface for SharePoint, and two, they were struggling to provide access to critical business data for their increasingly mobile workforce," remarked Seth Talbott, Founder and CEO of AtomOrbit "The BYOD status quo is custom one-off native apps, but anyone being honest about it will admit that native apps are an expensive short-term solution for the Enterprise BYOD problem. While providing an amazing user interface for SharePoint, we can also provide a robust platform for blending in not only standard SharePoint data but also data from customer's internal and cloud-based sources. "

TEAMFUSION FEATURES

- Responsive design for perfectly tailored user experiences on phones, tablets & desktops.
- Exquisite user experiences for all of SharePoint's data types (lists, calendars, blogs, etc.).
- Device agnostic technology so that it works on any device, anywhere, anytime.
- HTML5 platform with no browser plugins.
- No app to install, just a flawless and efficient browser interface that feels like an app.
- Compatible with both SharePoint 2010 and 2013.
- Users can customize their own dashboard with whatever data they chose with a few clicks, swipes or touches.

"AtomOrbit provides a modern interface that's responsive and takes SharePoint into the future and will make users happy and developers clamoring for more," commented Joel Oleson, named one of the top 3 worldwide SharePoint influencers by Forbes.com. "When I first saw AtomOrbit, I was super impressed. This is a great example of showing stuff that will stop people in their tracks saying, 'I didn't know you could do that!'"

Juniper Networks' Dave Roush, one of AtomOrbit's customers says "Because AtomOrbit has a dynamite product and vision, while I have a burning need to solve business problems with a solution that works on any device, anytime. It is a perfect partnership."

By leveraging a customer's existing SharePoint investment, TeamFusion delivers a stunning device agnostic Dashboard for existing SharePoint data seamlessly blended together with internal and cloud-based data. BYOD problem solved.

About Joel Oleson

Joel, also known as SharePoint Joel, is the most connected man in the SharePoint community. He played a pivotal role in the early success of SharePoint as the first full-time employee hired in IT to deploy and manage Tahoe and Office Web Server at Microsoft. Joel architected and designed the first global deployments of SharePoint at Microsoft. In 2003, he managed the global collaboration team at Microsoft, which included file shares, personal storage and the SharePoint platform. Later, he was asked to design the first version of SharePoint in the cloud, or SharePoint Online. As a Senior Product Manager on the SharePoint team, he managed the IT audience and was an important technical voice for the SharePoint 2007 release. For more information about Joel, visit <http://www.sharepointjoel.com>, or his company www.salient6.com or follow @Salient6 or @JoelOleson on Twitter.
