

# InVigor®

InVigor Canola Hybrids

---

Build a successful canola harvest with our portfolio of elite canola products and the LibertyLink® system. The strong start and healthy emergence provided by Prosper® EverGol™ seed treatment, the powerful broad-spectrum weed control of Liberty® herbicide and the tough disease protection of Proline® fungicide help hybrids reach their full yield potential.

---

## InVigor L252 - New for 2014

In addition to high stress tolerance and early season vigor, L252 is a mid to full maturing hybrid with superior oil content that offers increased yield. It gives you greater flexibility at harvest by helping to spread out swathing and harvest timing. L252 also continues the InVigor legacy of superior blackleg tolerance.

## InVigor L160S - New for 2014

As the threat of sclerotinia continues to spread, Bayer CropScience is pleased to introduce their first Sclerotinia-Tolerant canola hybrid, InVigor® L160S.

Ideally suited for North Dakota growers, InVigor L160S is your first line of defense against sclerotinia, with no compromise in yield. Additionally, InVigor L160S offers superior blackleg tolerance and excellent standability ratings.

Although InVigor L160S helps protect against sclerotinia, for superior disease control you should consider a fungicide application (as warranted by your disease pressure and environmental conditions).

## InVigor L140P - New for 2014

Canola growers are all too familiar with pre-harvest yield loss due to environmental conditions such as late-season moisture and wind events that prematurely split pods and shell seeds.

The new InVigor® L140P hybrid helps growers minimize lost yield and provides growers with the flexibility to consider delayed swathing or straight cutting to maximize yield opportunity.

Straight cutting and delayed swathing allows the pods to fill for a longer period of time, resulting in larger seeds, a fuller pod and potential for lower green seed counts. This technology may also reduce the amount of volunteer canola in your fields by ensuring the seeds end up in your bin, minimizing management challenges in future growing seasons.

## InVigor L130

The L130 is a mid-season hybrid for North Dakota with a maturity similar to InVigor 8440. It has the highest blackleg rating possible and is fully resistant to Liberty® herbicide.

## InVigor 5440

The L5440 is a top yielding, full-season hybrid with outstanding lodging resistance and built-in resistance to blackleg. It has high oil content with excellent harvestability.

## InVigor L120

The L120 is an early season hybrid well suited for spring canola areas in North Dakota. This hybrid has good oil content, R rated for Blackleg, short to medium height with good lodging resistance and well suited for swathing or straight cut harvest.
