

## **New 3D DLP Pocket Projector Makes Anything Possible: Chinavasion**

GAMERS and media enthusiasts will be able to enjoy three dimensional footage at any time of the day or night in any location thanks to an innovative new gadget, which makes 3D projection easy and affordable according to pico projector specialist Chinavasion.

The company is releasing a pocket DLP projector which doesn't only produce the most crystal clear 3D footage the world has ever seen; it also does it from any image at all regardless of whether it is 2D or 3D according to Rose Li, PR manager for the projection specialist.

"I know of nothing else that comes anywhere close to this type of functionality," says Li.

Li says the pocket DLP projector essentially acts as a customers' own R2-D2, beaming out holographic 3D projections with more clarity, smoothness and color than shown in the famous 1979 film.

"This projector brings the world so close to Star Wars technology it is not even funny."

With a weight of just 450 grams and a maximum projected image of 300 inches, Li says the only thing diminutive about the Smart 3D DLP Projector is its size.

"You might think that this is tiny but there is nothing small about the device's clarity or performance."

While technology like this would be expensive if released by a marquee brand, Li says that Chinavasion has been able to release it for a lot less than many other name brand projectors. "Put out by someone else this would have a price tag in the thousands, Chinavasion is selling it for well under \$800."

"Despite this the projector is still made with the same display resolution and build quality of world leading brands from the US, Japan and Europe."

With more than 360,000 satisfied customers shopping from almost every corner of the world, Chinavasion has proven itself to be the destination for hot gadgets like DLP Android tablet projectors and Android phones. To learn more visit the site at <http://www.chinavasion.com>
